ABOUT THIS CATALOGUE

Read this first

What this catalogue covers, how it was checked, and how to read it.

What this is

One section for each of six Prabhas SaaS apps. Each says what the app does, how it works, how accountants, freelancers and chartered accountants use it, what it costs, and what it does not do.

Not in this edition: **Dastavej**, the free PDF editor, and **Desk**, the AI office suite, which is still in planning. Desk appears in the **Coming next** section, clearly marked as a plan.

Why you can rely on it

- Every statement was checked against the app itself, its published pages or the pricing page. Each page names its sources.
- Every section ends with a **truth sheet**: what is confirmed, what needs something else, what is not included, and what to verify first.
- The fit check says **"Not designed for"** wherever that is the honest answer.

What it is not

- Tax, legal or accounting advice. The GST and income-tax treatment of your transactions stays with you and your professional.
- A promise that a feature works before its dependency does: where a feature needs a provider, a plan or another app, the page says so.
- A price list for all time. Prices are as read on 22 Oct 2026, exclude 18% GST, and change; the pricing page is the record.

How to read a section

Each section opens with the app, then: overview · capabilities · two functional flowcharts · role guide · plans · truth sheet.

Fit levels

- ●●●● **Built for**
- ●●●○ **Works well**
- ●●○○ **Indirect**
- ●○○○ **Limited**
- ○○○○ **Not designed for**

How to read a flowchart

The app does it · A person does it · AI proposes, a person decides · A decision · Start or finish

Numbered steps match the capability pages of the same section. Dashed arrows show a path back to an earlier step.

Edition · 2026 · v1.0 · printed 22 Oct 2026

THE SUITE

How the apps fit together

Sales are captured in Seedha Bill, Samvaad or Sanchay. Lekhya keeps the books. Lekhya Pramaan is where a chartered accountant reviews, signs and files. Shilp3D stands alone.

Between the stages, a person approves. Invoices and drafts wait in Lekhya's review queue; nothing posts itself.

How records move between apps

FROM → TO	WHAT MOVES	WHAT HAPPENS
Seedha Bill → Lekhya	Finalised invoices; Razorpay receipts; stock as item masters	Invoices wait for approval, then post as sales and GST output. Receipts post straight away. Inventory sync needs an active Lekhya subscription.
Samvaad → Lekhya	Confirmed sales and purchase drafts	Drafts wait in Lekhya's import approval queue for a person to approve.
Samvaad → Seedha Bill	Sales confirmed for Seedha Bill	They arrive in its Samvaad tab; you issue them through the normal invoice flow.
Sanchay → Seedha Bill	Counter sale events	Meant to become Seedha Bill invoices. Confirm this connection is live in your setup before relying on it.

Who each app is for

The honest fit check for the three professions this catalogue covers. The reason behind each rating is in that app's section.

	ACCOUNTANTS	FREELANCERS	CHARTERED ACCOUNTANTS
Seedha Bill	●●●○ Works well	●●●● Built for	●●○○ Indirect
Lekhya AI	●●●● Built for	●●●○ Works well	●●●○ Works well
Lekhya Pramaan	●○○○ Limited	○○○○ Not designed for	●●●● Built for
Samvaad	●●●● Built for	●●●○ Works well	●●●○ Works well
Sanchay	●●○○ Indirect	○○○○ Not designed for	●○○○ Limited
Shilp3D	○○○○ Not designed for	●●●○ Works well	○○○○ Not designed for

PLANS AT A GLANCE

What every plan costs

Every plan and price in this catalogue, in one place. Limits and inclusions are on each section's plans page.

APP	PLAN	PRICE	BASIS
Seedha Bill	Basic	**₹59**	one-time + 18% GST
	Pro	**₹179**	one-time + 18% GST
	Max	**₹349**	one-time + 18% GST
Lekhya AI	ERP Lite	**₹499**	per month · ₹4,990per year + 18% GST
	ERP Pro	**₹1,299**	per month · ₹12,990per year + 18% GST
	ERP Lifetime	**₹24,999**	one-time + 18% GST
Lekhya Pramaan	Pramaan Lite	**₹999**	per month · ₹9,990per year + 18% GST
	Pramaan Pro	**₹2,999**	per month · ₹29,990per year + 18% GST
Samvaad	With Lekhya ERP	**Included**	
	With Lekhya Pramaan	**Included**	
Sanchay	Starter	**₹299**	per month · ₹2,990per year + 18% GST
	Retail	**₹699**	per month · ₹6,990per year + 18% GST
	Operations	**₹1,499**	per month · ₹14,990per year + 18% GST
Shilp3D	Free	**₹0**	start without paying
	Pro	**₹299**	per month · ₹2,999per year + 18% GST

Price basis, stated plainly

- Prices **exclude GST**. 18% GST is added at checkout.
- **14-day free trial** on every paid app, no card needed.
- Shilp3D is free to start. Samvaad has no price of its own: it is included with Lekhya ERP and Pramaan.

Read before you buy

- Plan limits (users, companies, counters, actions) are on each section's plans page.
- Extra AI actions, add-ons and annual billing are listed there too.
- Combination packs (for example Seedha Bill with Lekhya ERP) and lifetime plans exist: see the pricing pages.
- The pricing page is the current record.

Source · prabhassaas.in/pricing and the Shilp3D app page, read 22 Oct 2026. Seedha Bill plans are one-time; the rest are per month or year as shown.

WHERE TO START

Your first step, app by app

APP	ADDRESS	TRIAL	FIRST STEP
Seedha Bill	seedhabill.prabhassaas.in	14 days free, no card	Sign up with your email and verify. GSTIN is optional.
Lekhya AI	lekhya.prabhassaas.in	14 days free, no card	Sign up with Google or email. Add your company GSTIN: it is needed for GST filing.
Lekhya Pramaan	pramaan.prabhassaas.in	14 days free	Request access with your ICAI membership number. For practising CAs.
Samvaad	samvaad.prabhassaas.in	Included with Lekhya ERP and Pramaan	Android app, version 0.1.0. The Google Play listing is coming soon.
Sanchay	sanchay.prabhassaas.in	14 days free, no card	Sign in with your Prabhas SaaS login. After the trial it stays locked until you pay.
Shilp3D	shilp3d.prabhassaas.in	Free to start · 14-day Pro trial	Open it in your browser. Pro cloud sync uses your Prabhas SaaS account.

Which app first?

IF YOU…	START WITH
raise GST invoices for clients	**Seedha Bill**
keep books, reconcile the bank or prepare GST returns	**Lekhya AI**
run a chartered accountancy practice: UDIN, audit reports, DSC, deadlines	**Lekhya Pramaan**
want to capture sales and supplier bills from a phone (needs Lekhya or Seedha Bill)	**Samvaad**
run a shop counter or a warehouse with stock to track	**Sanchay**
draw floor plans and structural or services layouts	**Shilp3D**

One Prabhas SaaS account

The apps share one Prabhas SaaS login and one billing history, so signing in once carries across the suite. Each paid app has its own plans: you subscribe per app, and only to the ones you use.

Sources · prabhassaas.in app pages, pricing page and each app's own help pages, read 22 Oct 2026. Sign-up steps can change; the app's own sign-in page is the record.

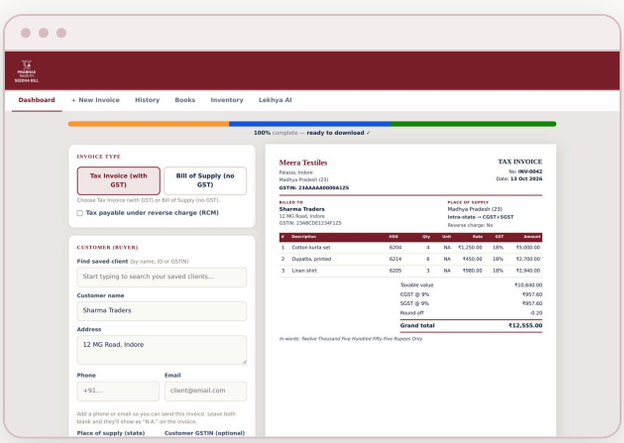

Seedha Bill

GST INVOICING

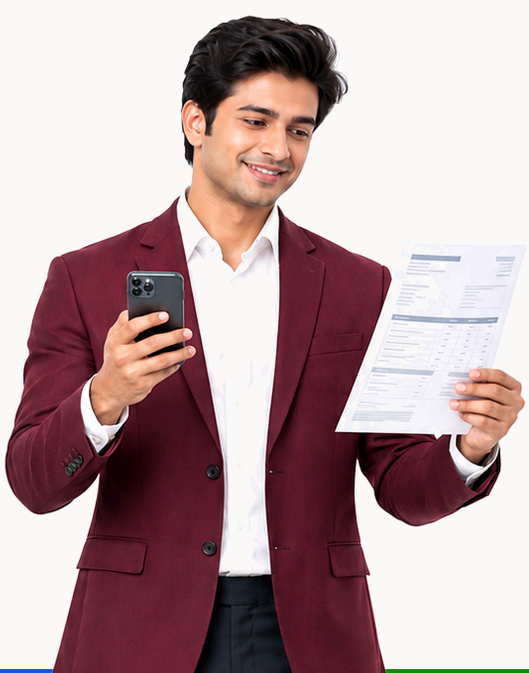

Professional GST invoices in minutes, not spreadsheets.

The simplest way for Indian freelancers and small businesses to create GST-ready invoices, with CGST, SGST and IGST worked out for you, and a one-step path into Lekhya when your accountant wants the books.

GST INVOICES · HSN / SAC · WHATSAPP & EMAIL · POSTS TO LEKHYA

Seedha Bill · Sample data (an invented textile business).

WORKS WITH
Lekhya · Samvaad · Sanchay

OVERVIEW

GST invoicing that stays out of the way

Seedha Bill is a browser app for raising GST invoices. You build and preview as much as you like, and pay only when you download the final PDF.

It works out **CGST and SGST for same-state billing and IGST for inter-state**, from your client's state and the rate you choose per item. It suggests **HSN/SAC codes** for your line of work, keeps a **client list** you can search by name, ID or GSTIN, and lets you switch between a **tax invoice** and a **bill of supply** on each invoice.

Finished invoices go to clients by **WhatsApp or email**, or out as a PDF. When you work with an accountant, a finalised invoice can be **sent to Lekhya**, where a person approves it before it posts as a double-entry sale with GST output. Nothing posts itself.

In one line

Raise a correct GST invoice, send it, and let your accountant's books pick it up.

BEST FIT

- Freelancers and consultants who bill clients every week
- Small businesses that need invoices, not a full accounting suite
- Teams whose accountant works in Lekhya or Lekhya Pramaan

The six things it does

01
Correct GST, always
CGST + SGST within a state, IGST across states, at the rate you set per item.

02
HSN / SAC codes
Codes suggested for your line of work, so classification is one tap away.

03
Client list
Every client saved with a Client ID. Search by name, ID or GSTIN and details fill in.

04
Tax invoice or bill of supply
Switch per invoice. Invoice numbers are assigned automatically.

05
Send and track
WhatsApp, email or PDF. A dashboard shows issued, collected and pending.

06
Posts to Lekhya
Send finalised invoices to your accountant's books, with approval before posting.

Where it sits in the Prabhas SaaS suite

Seedha Bill is where a sale is captured. Lekhya keeps the books. Lekhya Pramaan is the CA edition that reviews them.

REVIEW
Lekhya Pramaan

Sources · prabhassaas.in app registry; Seedha Bill home page copy; Seedha Bill app (app.html); Lekhya connector guide.

CAPABILITIES

Invoicing

What happens between “new invoice” and a finished, correctly taxed document.

01 Correct GST on every invoice

CGST + SGST for same-state billing, IGST for inter-state, calculated from your client’s state at the rate you choose per item. For branches, the **branch’s state, not the head office’s**, decides which applies.

INCLUDED IN EVERY PLAN

02 HSN / SAC suggestions

Service codes are suggested for your line of work, grouped by trade, so the right classification is one tap away on each invoice.

INCLUDED IN EVERY PLAN

03 Client master list

Every client you invoice is saved with a Client ID. Next time, search by name, ID or GSTIN and the details fill in. You only add the services. The list exports to CSV.

INCLUDED IN EVERY PLAN

04 Tax invoice and bill of supply

Issue a GST tax invoice or a bill of supply, switching per invoice. Automatic numbering keeps the series clean.

INCLUDED IN EVERY PLAN

05 More than one branch

Bill from each place of business. A branch keeps its own address, its own GSTIN where it is separately registered, and its own invoice number series. Branch packs unlock additional branches.

BRANCH PACKS

06 Your logo and saved products

Upload your business logo once so it prints on every invoice, and store the services you bill often.

PRO AND MAX PLANS

The GST decision, with numbers

An illustration at an 18% rate on a ₹10,000 item. The rate is whatever you choose per item.

CLIENT’S STATE	TAX APPLIED	AMOUNT	INVOICE TOTAL
Same state as the branch	CGST 9% + SGST 9%	₹900 + ₹900	₹11,800
Another state	IGST 18%	₹1,800	₹11,800

Worked example for illustration only. Seedha Bill applies the rate you choose and the states on the invoice; you stay responsible for the GST treatment of each item.

Sources · Seedha Bill home page features and FAQ; Seedha Bill CLAUDE.md (HSN/SAC and GSTIN rules).

CAPABILITIES

Delivery, records and connections

After the invoice is built: getting it to the client, keeping records, and passing it to the books.

01 **Free preview, pay on download**

Build and preview as many invoices as you like. An invoice counts against your plan only when you download the final, watermark-free PDF.

02 **WhatsApp and email sends**

Send the invoice straight to the client. Sends count against the plan’s send allowance.

03 **Dashboard and GST summary**

Invoices issued, payment collected versus pending, and a GST summary to help you prepare your filing. Filtering covers GST invoices, bills of supply, paid, unpaid, cancelled and drafts.

04 **Credit notes**

Cancel an invoice by raising a credit note. The original is kept for your records.

05 **Collect customer payments**

Collect invoice payments into **your own Razorpay gateway**, shared across Prabhas apps or kept separate for Seedha Bill or a branch. Prabhas SaaS subscription payments are separate from money your customers pay you.

06 **Samvaad drafts and inventory**

Sales you confirm in Samvaad arrive in the Samvaad tab; review one, open it, then issue it through the normal invoice flow. A stock register with barcodes, CSV export and a movement history sits in the Inventory tab.

07 **Send to Lekhya for approval**

Finalised invoices are queued in Lekhya for approval, then post as double-entry sales plus GST output. Razorpay-captured payments post as receipts. Inventory can sync as item masters.

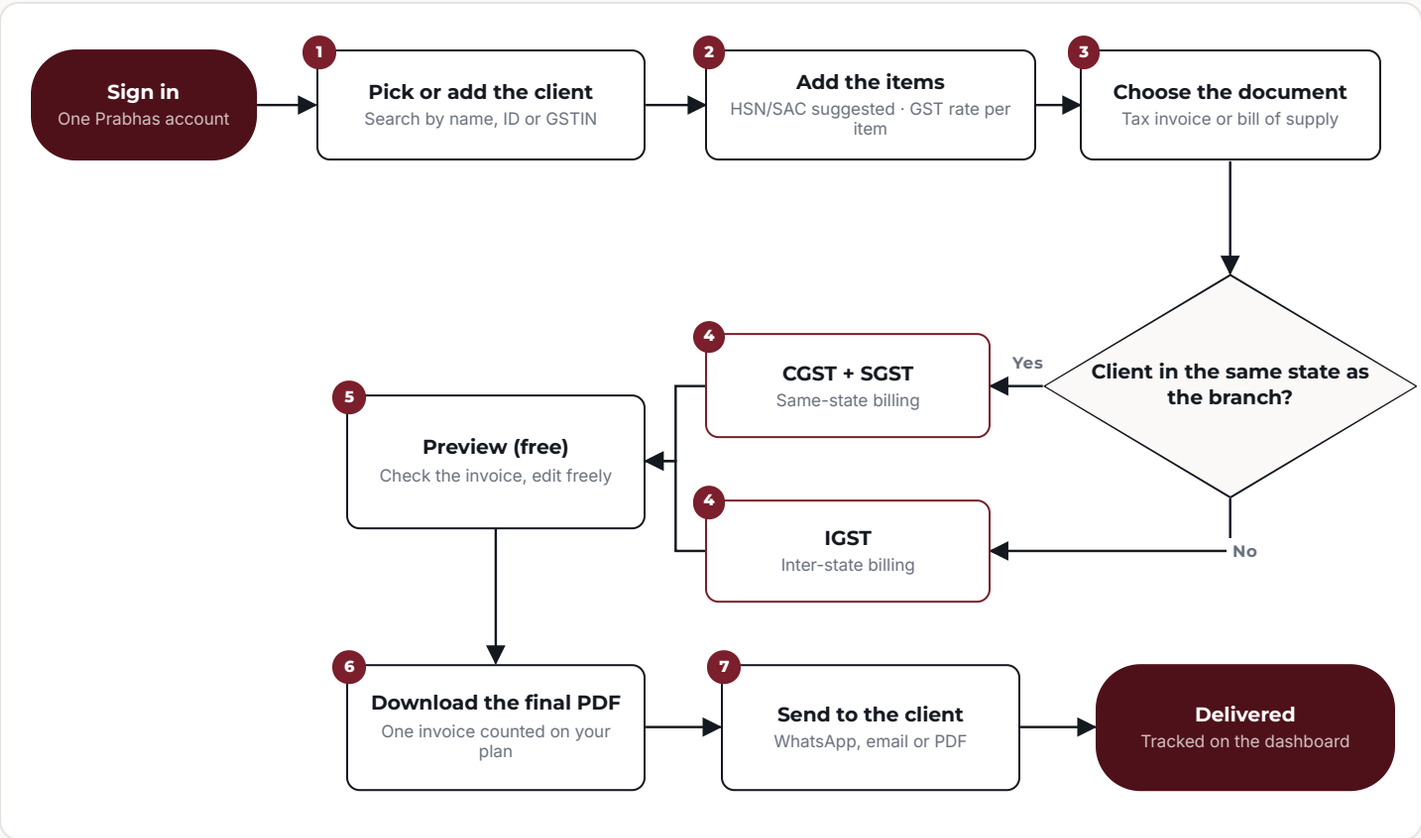

INVENTORY SYNC NEEDS AN ACTIVE LEKHYA SUBSCRIPTION

Sources · Seedha Bill app (app.html: history, dashboard, payments, Books, Inventory, Samvaad and Lekhya panels); Seedha Bill home page FAQ; Lekhya connector guide.

FUNCTIONAL FLOWCHART

From a blank page to a delivered GST invoice

Seven decisions you make, and the one the app makes for you: which GST applies.

App does it · A person does it · AI proposes, a person decides · Decision · Start / finish

Numbered steps match the capability pages of this section.

Preview is always free

Only the final download uses an invoice from your plan.

Changed your mind?

Cancel an issued invoice with a credit note. The original stays on record.

Branches

Each branch has its own number series. Its state decides CGST+SGST or IGST.

What counts against your plan

Seedha Bill meters two things only. Everything else is unlimited.

Build and preview

Unlimited and free, on every plan.

Final PDF download

Uses **one invoice** from the plan's download allowance (60, 250 or 750).

WhatsApp or email send

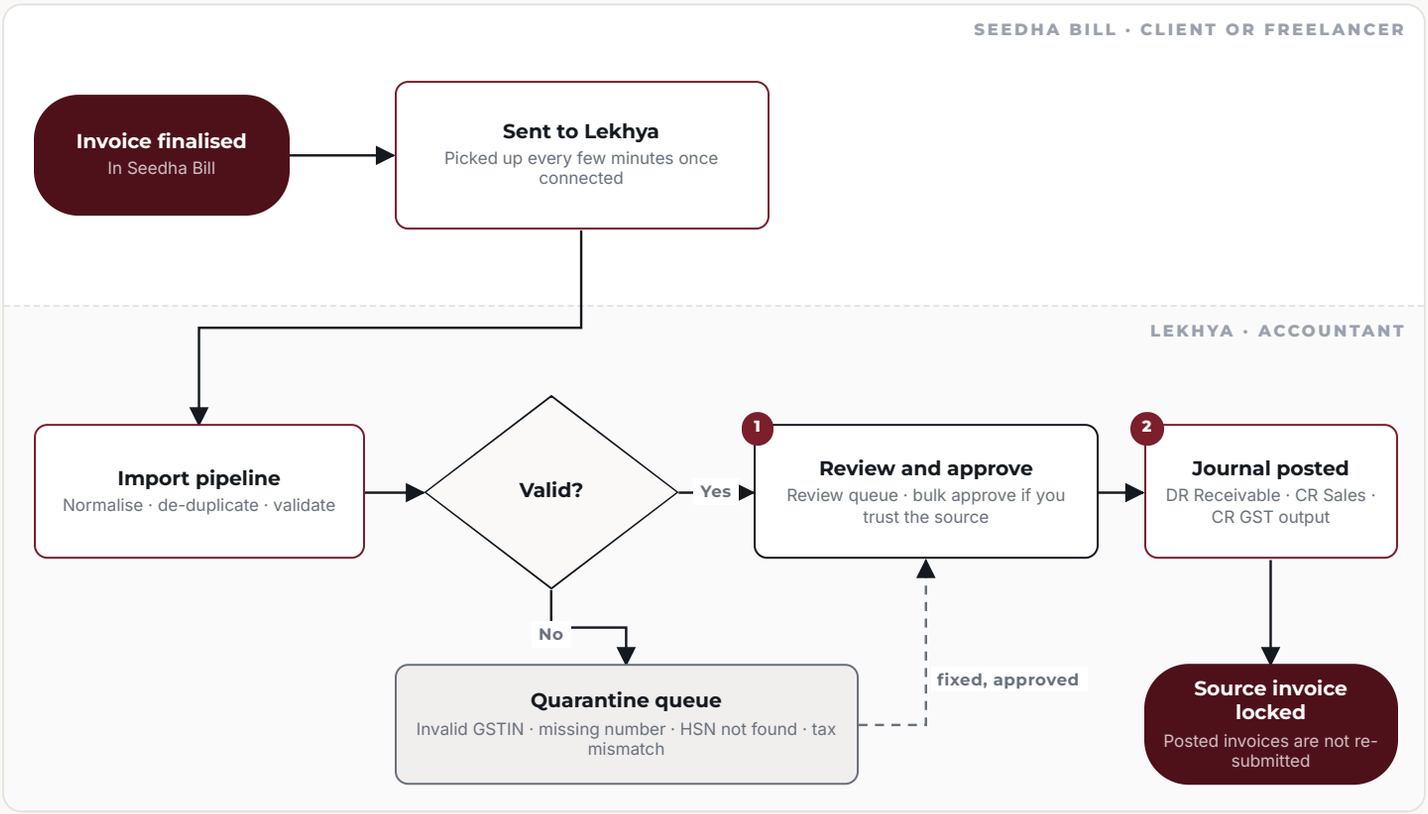

Uses **one send** from the plan's send allowance (50, 250 or 800).

Sources · Seedha Bill home page ("How it works", features, FAQ); Seedha Bill app invoice and history screens.

FUNCTIONAL FLOWCHART

From finalised invoice to ledger

An invoice is a claim about what was sold, so a person approves it before it reaches the books. Invalid invoices never enter the ledger.

Numbered steps match the capability pages of this section.

Same Prabhas account

Connect Seedha Bill in Lekhya's Connector settings, with one toggle.

A client's own account

A connection code, issued from Lekhya's Connector page, links a client's Seedha Bill to your Lekhya.

Rejecting is safe

Rejecting removes an invoice from the queue. The original in Seedha Bill is not affected.

What crosses the Lekhya connection

Three kinds of record travel from Seedha Bill to Lekhya, and they are treated differently on purpose.

RECORD	WHAT IT IS	WHAT HAPPENS IN LEKHYA
Invoice	Every finalised invoice	Queued for approval, then posted as sales + GST output. Nothing posts itself.
Receipt	A payment captured by Razorpay	Posted straight away: amount, date and reference come from the gateway. Anything ambiguous waits in the queue.
Inventory	Your stock register as item masters: SKU, barcode, HSN, GST rate, price, quantity, location and more	Re-syncing updates an item instead of duplicating it. Only items changed since the last sync are sent.

Sources · Lekhya "How Lekhya works" flow pages and SeedhaBill connector guide; Seedha Bill app (Lekhya panel).

IN DAILY USE

Seedha Bill for accountants, freelancers and CAs

Seedha Bill is built for the person who raises the invoice. Accountants and CAs meet it from the other side: as the source of what lands in their books.

Freelancers

●●●● Built for

This is the person Seedha Bill is written for: the marketing page opens with “Indian freelancers and small businesses”.

1. **Create your account and start the trial**
   Sign up with your email and verify. 14 days free, no card. Your GSTIN is optional: add it in your business profile and it prints on every invoice.
2. **Raise the invoice**
   Pick or add the client, add items with HSN/SAC suggestions, and Seedha Bill applies the right GST. Preview as often as you like.
3. **Download and send**
   Download the final PDF, then send it by WhatsApp or email. Track what is paid and pending on the dashboard.
4. **Hand the books to your accountant**
   Connect Seedha Bill to your accountant’s Lekhya. Invoices queue there for their approval, so you stop forwarding PDFs.

Accountants

●●●○ Works well

Two uses: bill your own clients the way any freelancer would, and receive your clients’ invoices in Lekhya instead of re-typing them.

1. **Ask clients to connect**
   A client on Seedha Bill links to your Lekhya through a connection code, issued and revoked from Lekhya’s Connector page.
2. **Work from the review queue**
   Incoming invoices wait in Lekhya’s Review Queue with number, customer, amount and GST breakdown. Approve, reject, or bulk-approve.
3. **Trust the checks**
   Imports are normalised, de-duplicated and validated. Invalid invoices go to a quarantine queue instead of the ledger.

Chartered Accountants

●●○○ Indirect

A CA practice usually meets Seedha Bill through clients. Your working tool is Lekhya Pramaan; Seedha Bill is the capture side.

1. **Run clients from one firm login**
   In Lekhya Pramaan you manage every client company from one login, each connected to its own Seedha Bill.
2. **Review before posting**
   Every imported invoice is a claim until a person approves it. Your review is the control.
3. **Bill your own fees**
   Seedha Bill also works as an invoicing tool for the firm itself, on the same plans as anyone else.

Sources · Seedha Bill home page; Lekhya connector guide and flow pages; Lekhya Pramaan pages.

PLANS & GETTING STARTED

One-time plans. No subscription, no auto-charge.

Pay once. The plan stays active until its included invoices are used, then you renew with any plan.

Basic

₹59 one-time + 18% GST

60 invoice downloads · 50 WhatsApp/email sends · unlimited build and preview · GST, HSN/SAC, dashboard · client list and CSV export

Pro MOST CHOSEN

₹179 one-time + 18% GST

250 invoice downloads · 250 WhatsApp/email sends · everything in Basic · your logo on invoices · priority in-app support

Max

₹349 one-time + 18% GST

750 invoice downloads · 800 WhatsApp/email sends · everything in Pro · best value per invoice for high-volume billing

Also on the pricing page

- Extra branches, one-time: 1 branch ₹199, 3 branches ₹499, 10 branches ₹1,299 (before GST). Your account includes your head office.

Plans side by side

	BASIC	PRO	MAX
Price (one-time, before GST)	₹59	₹179	₹349
Invoice downloads included	60	250	750
WhatsApp / email sends included	50	250	800
Price per included download*	about ₹0.98	about ₹0.72	about ₹0.47
Your logo on invoices	No	Yes	Yes
Priority in-app support	No	Yes	Yes

*Price divided by downloads included, before 18% GST. Our arithmetic, shown for comparison.

Getting started

1. **Create your Prabhas SaaS account**
   Sign up with your email and verify. One login works across the Prabhas SaaS apps.
2. **Start the 14-day free trial**
   Every new account starts with a free trial. No card needed.
3. **Set up your business profile**
   Add your business details and logo. Your GSTIN is optional and prints on every invoice when present.
4. **Build your first invoice**
   Add a client and items, preview, then download. Pick a plan only when you are ready.

Price basis, stated plainly

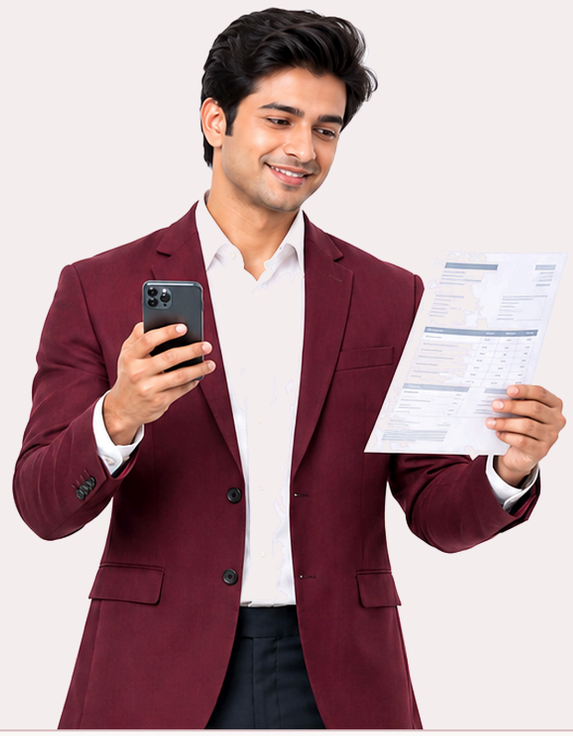

- Prices on the pricing page **exclude GST**. 18% GST is added at checkout.
- An invoice counts when you **download the final PDF**. Building and previewing are free.
- Payment by Razorpay: UPI, cards and netbanking. No recurring charges.
- Refund of a plan can be requested within **7 days** of purchase. A cancelled invoice is handled with a credit note.

Source · prabhassaas.in/pricing (Seedha Bill section), Seedha Bill home page FAQ and the platform plan catalogue, read 22 Oct 2026. Prices change: the pricing page is the current record.

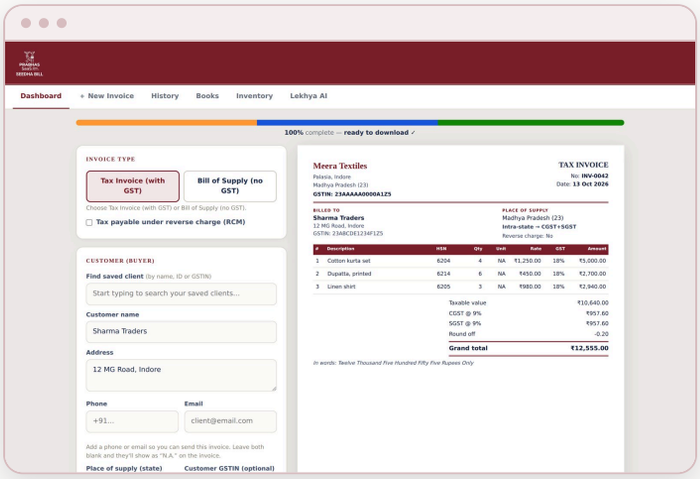

IN THE APP

Professional GST invoices in minutes, not spreadsheets.

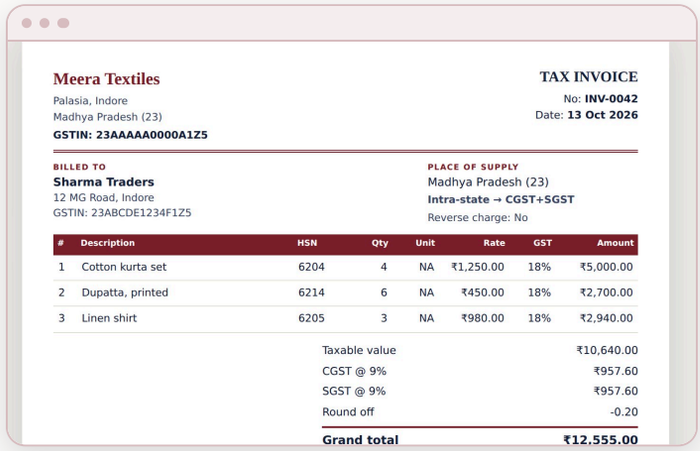

The simplest way for Indian freelancers and small businesses to create GST-ready invoices, with CGST, SGST and IGST worked out for you, and a one-step path into Lekhya when your accountant wants the books.

GST INVOICES · HSN / SAC · WHATSAPP & EMAIL · POSTS TO LEKHYA

New-invoice screen: customer, items, live tax-invoice preview

The finished tax invoice: GSTIN, place of supply, CGST + SGST, round-off, amount in words

01

About these screens · Sample data (an invented textile business). Screens are shown as supplied to the BrandKit; the product changes, so the app itself is the record.

WHAT'S NEXT

Seedha Bill: improvements anticipated

Only items that are written down in the product's own documents. None is dated.

NEEDS OWNER DECISION

Sanchay sales invoices through Seedha Bill

A recipe that raises sales invoices and inter-GSTIN stock transfers from Sanchay. Documented as not built yet; it needs Seedha Bill's invoice API.

Source: Sanchay docs/domain

PROPOSED

Server-side enforcement of the registration and GSTIN rule

The rules are live in the sign-up form. Enforcing them on the server, so they hold however an account is created, is written up and not yet applied.

Source: BrandKit guidelines/REGISTRATION_STANDARD.md

Seedha Bill: reading this page

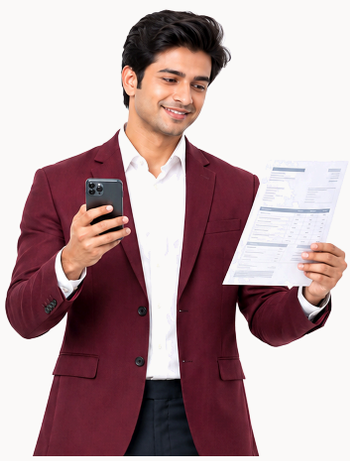

Seedha Bill has no longer published roadmap than this. Nothing on this page is dated or promised.

What the labels mean

- **Proposed / Planned / Planning**: written down; not built; no date.
- **Needs owner decision / Awaiting decisions**: blocked on a choice that is not ours to make alone.
- **Built, awaiting keys**: the code exists; it is not live until the provider credentials are in place.
- **Deferred / Not being built**: considered and set aside on purpose.

What this page is not

A promise, a delivery schedule or a feature you can buy today. Items come from each product's own repository documents; where none exist, the page says so rather than inventing a roadmap.

Tell us what would help you most

Order is shaped by what customers need and by what can be built and checked properly. If something here matters to you, or something missing does, say so before you decide.

enquiry@prabhassaas.in · WhatsApp **+91 70215 03895**

TRUTH SHEET

What is confirmed, what depends, what is not included

Read this page before you decide. It lists what Seedha Bill does today, what it needs from elsewhere, and what it does not do.

Confirmed in the product

- CGST + SGST and IGST worked out from client and branch state
- HSN/SAC suggestions, client list with Client IDs, tax invoice and bill of supply
- Credit-note cancellation that keeps the original
- Free build and preview; a plan counts only on final download
- Customer payments into your own Razorpay gateway
- Finalised invoices go to Lekhya for approval; nothing posts itself

Needs something else to work

- Inventory sync into Lekhya needs an active Lekhya subscription
- WhatsApp and email sends count against the plan's send allowance
- Collecting customer payments needs your own Razorpay gateway connected
- The Samvaad tab needs Samvaad, which has its own requirements

Not included

- E-invoice (IRN) and e-way bill generation: not in Seedha Bill. Lekhya ERP Pro lists them on the pricing page
- A full accounting suite: party ledgers, balance sheet, P&L, multi-warehouse, batch and serial tracking and TDS live in Lekhya
- GST return filing
- A monthly subscription: Seedha Bill plans are one-time

Verify before you rely on it

- Whether your invoices need an IRN: if your turnover brings you under e-invoicing, plan to use Lekhya ERP Pro
- Your GST treatment for each item: Seedha Bill applies the rate you choose, and you remain responsible for it
- Invoice and tax law changes: this catalogue is a product description, not tax advice

Questions worth asking us before you buy

- Do you need e-invoicing or e-way bills? If so, ask about Lekhya ERP Pro
- How many invoices a month? Plans count final downloads
- Does your accountant work in Lekhya? The connection saves re-typing

OVERVIEW

The books, kept properly

Lekhya (“writing”, in Sanskrit) keeps your books: a chart of accounts, a double-entry journal that refuses unbalanced entries, GST reports and bank reconciliation, in plain language.

Every transaction posts as **balanced debit and credit entries**. Posted journals are immutable: a mistake is corrected by a **reversing entry**, which keeps the audit trail clean. Reports (P&L, balance sheet, trial balance and more) are generated from the live ledger and export to PDF.

Documents get in through doors a person controls: **Seedha Bill invoices**, **Samvaad entries**, **AI-read invoice photos** and **Tally imports**. The AI layer **proposes and a person approves**. It never writes to the ledger directly.

In one line

Accounting that takes invoices in, checks them, and waits for a person to say yes.

BEST FIT

- Businesses doing their own accounts
- Accountants keeping several clients’ books
- Anyone moving from Tally who wants GST reports built in

The six things it does

01
Double-entry, enforced
Debit must equal credit before anything is written. Posted journals cannot be edited.

02
GST built in
CGST/SGST or IGST, HSN/SAC master, GSTR-1, GSTR-3B and GSTR-2B reconciliation.

03
AI proposes, you approve
Invoice reading, plain-language queries and account suggestions, each for you to accept or reject.

04
Seedha Bill connector
Invoices queue for review, then post as sales plus GST output.

05
Bank reconciliation
Import a statement, auto-match to the ledger, review what is left.

06
Roles and audit trail
Owner, Accountant and Viewer roles. Every change logged: who, what, when.

Where it sits in the Prabhas SaaS suite

Seedha Bill, Samvaad and Sanchay capture the transaction. Lekhya books it. Lekhya Pramaan adds the CA practice layer on top.

REVIEW
Lekhya Pramaan

Sources · Lekhya README; Lekhya Features page; prabhassaas.in app registry.

CAPABILITIES

Accounting core

The ledger that everything else feeds.

01 **Chart of accounts, ready on day one**

A standard Indian GST chart is pre-loaded. Customise account heads, add sub-accounts and set opening balances.

02 **Double-entry journal engine**

Every transaction posts balanced debit and credit entries. The engine **rejects any unbalanced entry** before it touches the ledger. Posted journals are immutable; corrections go through reversing entries.

03 **GST sales invoices**

Raise sales invoices with CGST/SGST (same state) or IGST (inter-state) calculated for you, with PDF generation. Save a draft while you edit; “Post to Ledger” locks the invoice and creates the entries.

04 **Purchases and expenses**

Log vendor bills and direct expenses with GST input credit captured on each line.

05 **Reports**

Profit and loss, balance sheet and trial balance, plus day book, sales and purchase registers, a GST summary, party statements and receivable and payable ageing, all generated from the live ledger. Export a report to PDF or send it by email.

06 **Parties, ageing and fiscal years**

A ledger for every customer and vendor, receivable and payable ageing, and several financial years under one account.

07 **Tally import**

Upload your Tally XML export. Ledgers, parties and all voucher types (sales, purchase, receipt, payment, journal, contra) are imported through the migration wizard.

Sources · Lekhya Features page (Accounting Core); Lekhya README (architecture principles); Lekhya Getting Started help.

CAPABILITIES

GST and compliance

Returns and documents prepared from the same ledger. Anything that talks to the GST system goes through a GST service provider (GSP) you connect.

01 GSTR-1
Outward supplies return populated from your sales invoices: B2B, B2C and the HSN summary.
ERP PRO LISTS GST E-FILING

02 GSTR-3B
Monthly summary with tax payable computed from your sales and purchase data.
ERP PRO LISTS GST E-FILING

03 GSTR-2B reconciliation
Import GSTR-2B and reconcile it against your purchase register.

04 E-invoice (IRN)
Prepare and generate an IRN through your chosen GSP.
ERP PRO · NEEDS A CONNECTED GSP

05 E-way bill
Generate an e-way bill for goods movement, filled from the invoice.
ERP PRO · NEEDS A CONNECTED GSP

06 GSTIN validation
Check a GSTIN before you raise an invoice. The state code is detected automatically.

07 HSN / SAC master
HSN and SAC codes pre-loaded with GST rates.

Sources · Lekhya Features page (GST Compliance); Lekhya README (GST via gateway); prabhassaas.in/pricing (ERP Pro).

CAPABILITIES

AI, banking and control

AI never writes to your ledger. It proposes; you review; you approve.

01 Invoice reading (OCR)
Upload a PDF or photo of an invoice. The AI fills in vendor, date, items, GST and amount; you verify and post.
ERP PRO

02 Plain-language questions
Ask a question about your books in plain words. Lekhya turns it into one of a set of pre-defined, safe queries and runs that. An in-app assistant also answers how-to questions about the screen you are on.

03 Account suggestions
Describe a transaction and get a suggested ledger account, for you to accept or change.

04 Bank reconciliation
Import a bank statement as a CSV file, match its transactions to ledger entries, and complete the reconciliation.
IN ERP LITE AND ABOVE

05 Roles and permissions
Invite team members as Owner, Accountant or Viewer.

06 Immutable audit trail
Every change is logged: who did what and when. Posted journals cannot be edited.

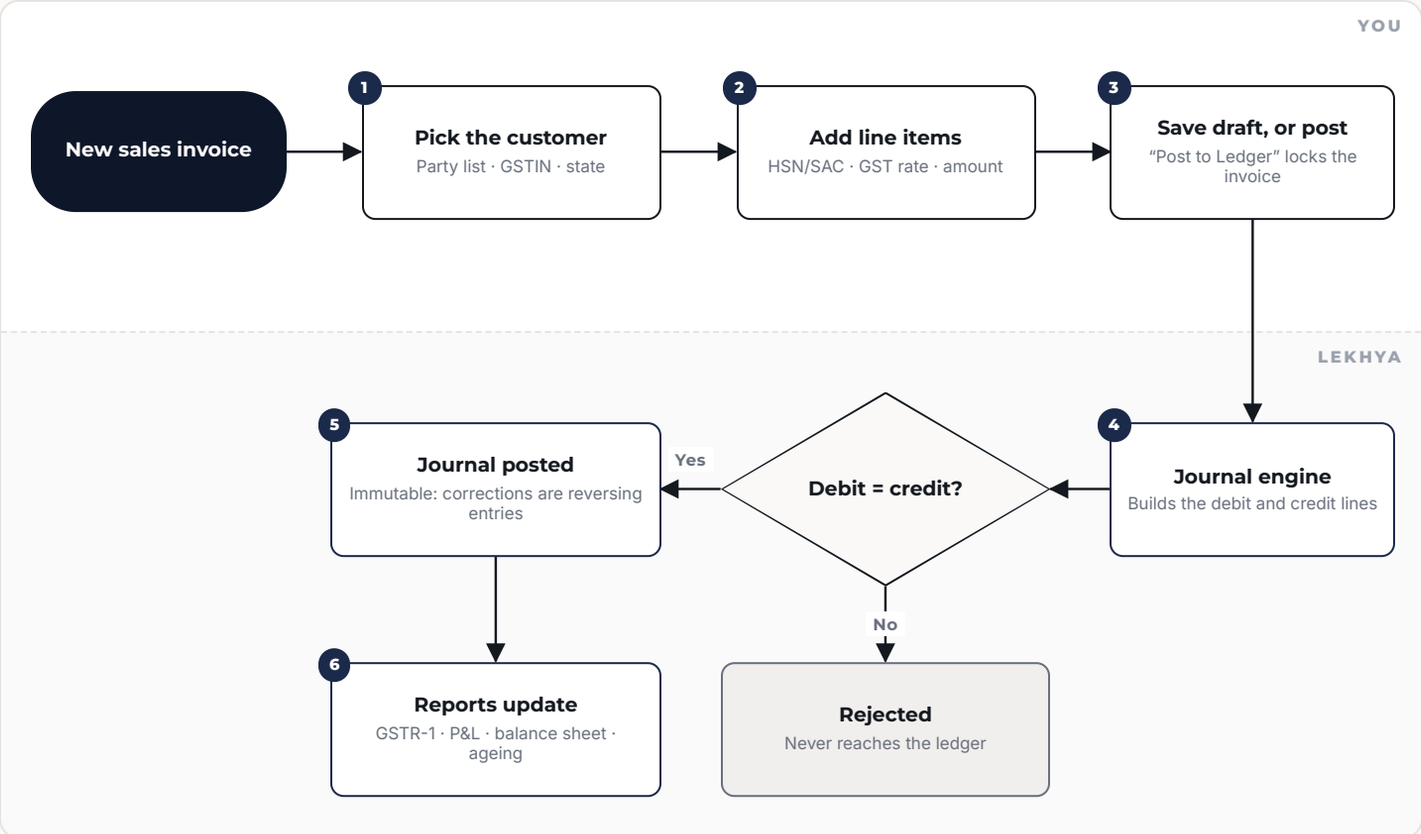

07 Companies kept apart; one sign-in
Each company’s records are isolated and every page, report and download is limited to the company you are signed in to. One Prabhas account signs you in across apps.

Sources · Lekhya Features page (AI Tools, Banking, Security); Lekhya README; prabhassaas.in/pricing.

FUNCTIONAL FLOWCHART

From invoice to ledger to reports

The ledger accepts nothing that does not balance, and nothing it has posted can be edited.

App does it · A person does it · AI proposes, a person decides · Decision · Start / finish

Numbered steps match the capability pages of this section.

What a ₹10,000 sale at 18% looks like in the books

From Lekhya's own worked example. Revenue excludes GST: the tax collected is a liability owed to the government.

ACCOUNT	DEBIT	CREDIT	WHY
Accounts receivable	₹11,800		The customer owes this
Sales revenue		₹10,000	Revenue earned
CGST output payable		₹900	GST collected for the government
SGST output payable		₹900	GST collected for the government
Total	₹11,800	₹11,800	Balanced

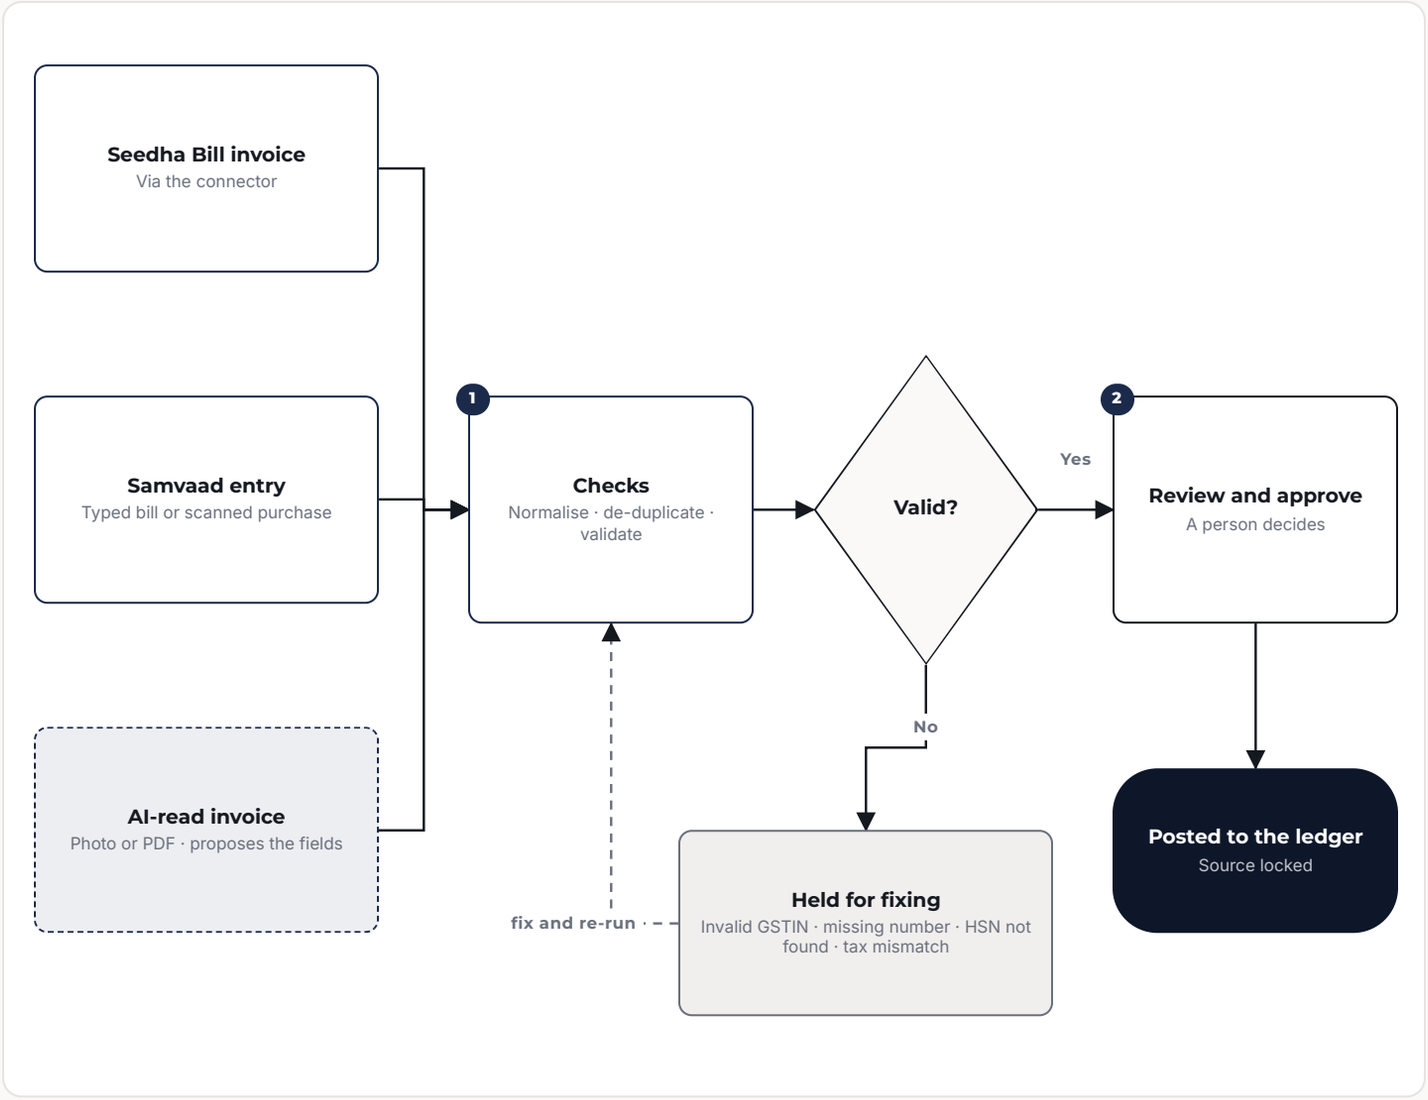

When the payment arrives: debit Bank ₹11,800, credit Accounts receivable ₹11,800.

Sources · Lekhya "How Lekhya works" flow (Invoice → Ledger → P&L) and Getting Started help.

FUNCTIONAL FLOWCHART

Every document enters through a door a person controls

Three sources feed the same checks and the same approval step. Anything invalid is held back, not posted.

Numbered steps match the capability pages of this section.

Same Prabhas account

One toggle in Lekhya's Connector settings links Seedha Bill.

A client's Seedha Bill

A connection code, issued and revoked from Lekhya's Connector page, links the two accounts.

AI never posts

AI-read fields are proposals. Nothing reaches the ledger until a person posts.

Sources · Lekhya flow pages and Seedha Bill connector guide; Lekhya Features page (AI Tools); Samvaad README.

IN DAILY USE

Lekhya AI for accountants, freelancers and CAs

Lekhya is written for the person who keeps the books. A CA practice has its own edition, Lekhya Pramaan, covered in its own catalogue.

Accountants

●●●● Built for

Lekhya Standard serves businesses doing their own accounts, and the same ledger serves the accountant who keeps their books.

1. **Set up the company**
   Enter the trade name, GSTIN (needed for GST filing), state, business type and fiscal year. A standard chart of accounts is already there.
2. **Bring the data in**
   Import from Tally by XML, connect Seedha Bill, or take Samvaad entries from the approval queue. Customers and vendors carry over from Seedha Bill.
3. **Review, approve, post**
   Work the review queue. Invalid invoices are held back. AI-read fields are proposals you verify.
4. **Close the period**
   Reconcile the bank statement, prepare GSTR-1 and GSTR-3B, reconcile GSTR-2B, and export P&L, balance sheet and trial balance.

Freelancers

●●●○ Works well

Lekhya's own pages say "from solo consultants to CA firms". If you only need invoices, Seedha Bill alone is enough; Lekhya adds real books and a place for your accountant to work.

1. **Raise invoices in Seedha Bill**
   Keep invoicing simple. Connect it to Lekhya when you want books.
2. **Let the ledger follow**
   Approved invoices post as sales with GST output. Razorpay-captured payments post as receipts.
3. **Hand your accountant a clean set**
   Invite your accountant with the Accountant role, or give them read access as a Viewer.

Chartered Accountants

●●●○ Works well

Lekhya keeps a client's books. For the practice itself (UDIN register, audit forms, DSC tracking, compliance calendar, many clients under one login) use Lekhya Pramaan.

1. **Keep clients' books**
   Use roles and the immutable audit trail so every change is attributable.
2. **Move to Pramaan for the practice**
   Pramaan is the CA edition, available to practising CAs with an ICAI membership number.
3. **Keep the AI on a leash**
   AI proposals never post themselves. Your review remains the control.

Sources · Lekhya README (editions table); Lekhya Features page; Lekhya Getting Started and Pramaan help pages.

PLANS & GETTING STARTED

ERP Lite, ERP Pro or Lifetime

Choose a month, a year or a lifetime. There is no auto-renewal, so there is nothing to cancel.

ERP Lite

₹499 /month · ₹4,990/year + 18% GST

1 user seat · 1 company · **150** AI actions/month · double-entry journals and GST reports · sales and purchase invoices · bank reconciliation · Tally import and PDF export

ERP Pro MOST CHOSEN

₹1,299 /month · ₹12,990/year + 18% GST

5 user seats · 1 company · **750** AI and **500** GST API actions/month · everything in Lite · AI OCR invoice extraction · Seedha Bill live connector · GST e-filing, e-invoice and e-way bill

ERP Lifetime

₹24,999 one-time + 18% GST

10 user seats · 3 companies · **750** AI and **500** GST API actions/month · all ERP Pro features · all future ERP updates · priority support for the life of the plan

Plans side by side

	ERP LITE	ERP PRO	ERP LIFETIME
Price (before GST)	₹499/mo · ₹4,990/yr	₹1,299/mo · ₹12,990/yr	₹24,999 one-time
User seats · companies	1 · 1	5 · 1	10 · 3
AI actions per month	150	750	750
GST API actions per month	—	500	500
Double-entry, GST reports, invoices, bank reconciliation, Tally import	Yes	Yes	Yes
AI OCR invoice extraction	—	Yes	Yes
Seedha Bill live connector	—	Yes	Yes
GST e-filing, e-invoice, e-way bill	—	Yes	Yes
Future ERP updates and priority support	—	—	Yes

— means not listed for that plan on the pricing page.

Getting started

1. **Create your account**
   Go to lekhya.prabhassaas.in and sign up with Google or email. One Prabhas account works across the suite.
2. **Set up your company**
   Add your trade name, GSTIN, state and fiscal year. The GSTIN is needed for GST filing.
3. **Add customers and vendors**
   Add parties by hand, or let them carry over from Seedha Bill.
4. **Post your first invoice**
   Pick the customer, add items, save a draft or post to the ledger.

Price basis, stated plainly

- Extra AI actions: ₹149 for 500, prepaid, never billed later. Annual billing gets 2 months free.
- Prices on the pricing page **exclude GST**. 18% GST is added at checkout.
- Every plan starts with a **14-day free trial**, no card needed.
- Every plan includes a monthly allowance of AI and GST API actions.
- Samvaad on Android is free with Lekhya ERP and Pramaan. Pramaan (CA edition) is priced separately.

Source · prabhassaas.in/pricing (Lekhya AI section), read 22 Oct 2026. Prices change: the pricing page is the current record.

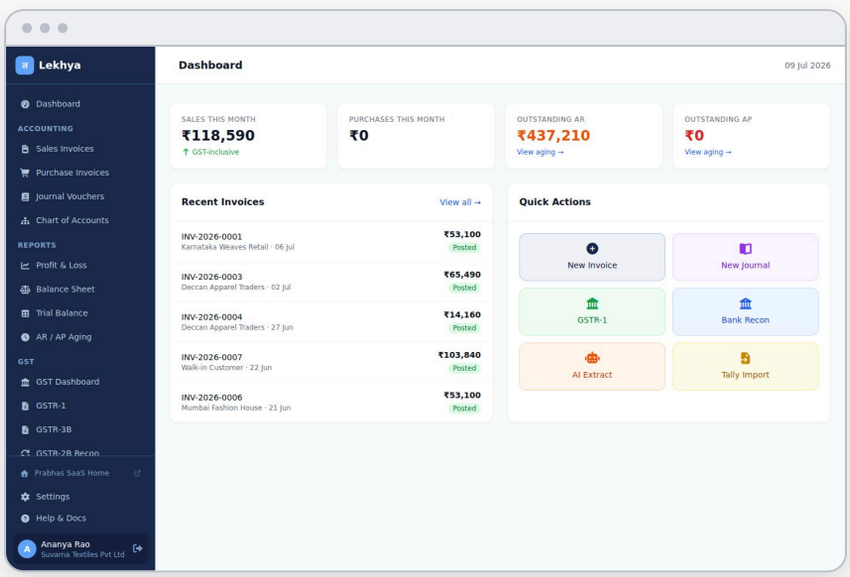

IN THE APP

GST-compliant, double-entry books that update themselves.

An accounting ERP for Indian businesses, accountants and CAs. Invoices from Seedha Bill and entries from Samvaad arrive in a review queue; a person approves them; the ledger, GST reports and bank reconciliation follow.

DOUBLE-ENTRY · GST RETURNS · AI PROPOSES, YOU APPROVE · TALLY IMPORT

Dashboard: month's sales, outstanding receivables and payables, recent invoices, quick actions

EDITIONS
Lekhya ERP · Lekhya Pramaan (CA)

01
Double-entry, enforced
Debit must equal credit before anything is written. Posted journals cannot be edited.

02
GST built in
CGST/SGST or IGST, HSN/SAC master, GSTR-1, GSTR-3B and GSTR-2B reconciliation.

03
AI proposes, you approve
Invoice reading, plain-language queries and account suggestions, each for you to accept or reject.

04
Seedha Bill connector
Invoices queue for review, then post as sales plus GST output.

05
Bank reconciliation
Import a statement, auto-match to the ledger, review what is left.

06
Roles and audit trail
Owner, Accountant and Viewer roles. Every change logged: who, what, when.

About these screens · Demo company data. Screens are shown as supplied to the BrandKit; the product changes, so the app itself is the record.

WHAT'S NEXT

Lekhya AI: improvements anticipated

Only items that are written down in the product's own documents. None is dated.

PROPOSED

Server-side enforcement of the registration and GSTIN rule

The rules are live in the sign-up form. Enforcing them on the server, so they hold however an account is created, is written up and not yet applied.

Source: BrandKit guidelines/REGISTRATION_STANDARD.md

Lekhya AI: reading this page

No separate Lekhya roadmap is published in the product repository. Items are added here only when the owner approves them.

What the labels mean

- **Proposed / Planned / Planning**: written down; not built; no date.
- **Needs owner decision / Awaiting decisions**: blocked on a choice that is not ours to make alone.
- **Built, awaiting keys**: the code exists; it is not live until the provider credentials are in place.
- **Deferred / Not being built**: considered and set aside on purpose.

What this page is not

A promise, a delivery schedule or a feature you can buy today. Items come from each product's own repository documents; where none exist, the page says so rather than inventing a roadmap.

Tell us what would help you most

Order is shaped by what customers need and by what can be built and checked properly. If something here matters to you, or something missing does, say so before you decide.

enquiry@prabhassaas.in · WhatsApp **+91 70215 03895**

TRUTH SHEET

What is confirmed, what depends, what is not included

Read this page before you decide. It separates what Lekhya does today from what depends on a provider or a plan.

Confirmed in the product

- Double-entry journals that reject unbalanced entries; posted journals are immutable
- GST invoices with CGST/SGST or IGST, HSN/SAC master, GSTIN validation
- Profit and loss, balance sheet, trial balance and registers with PDF export
- Tally import (upload, preview, run) and bank reconciliation from a CSV statement
- Roles, immutable audit trail and per-company isolation
- AI that proposes only; a person approves every posting

Needs something else to work

- E-invoice, e-way bill and return filing run through a GST service provider you connect
- AI OCR invoice extraction and the Seedha Bill live connector are on ERP Pro
- AI and GST API actions are metered per plan
- The Samvaad scan flow needs Samvaad, an Android app

Not included

- CA practice tools (UDIN register, audit forms 3CD/3CB, DSC register, compliance calendar, multi-client portfolio): those are Lekhya Pramaan
- Tax or legal advice: Lekhya prepares, you and your professional decide
- A guarantee that AI-read figures are correct: every one is a proposal

Verify before you rely on it

- Which GST service provider is live for your account before you depend on e-invoicing or filing
- Where AI processing runs for your plan: Lekhya supports local and cloud AI providers, so ask which applies to you
- Whether your turnover requires e-invoicing or e-way bills

Questions worth asking us before you buy

- Which GSP do you support for my state and volume?
- Can you migrate my Tally data, and how far back?
- Do I need Lekhya ERP or Pramaan if I serve several clients?

FOR
Practising CAs with an ICAI membership number

OVERVIEW

A practice, not just a ledger

Pramaan keeps the evidence of your work in one place: who prepared, reviewed and signed each report, which UDIN and certificate it carries, and where each client stands.

You run **every client company from one firm login**. Each client is its own company with its own GSTIN and its own books, up to your plan's limit. Practice records (tasks, reports, notices) belong to the company you are in when you add them.

Audit reports move through **draft, under review, signed and filed**. A signed report is **locked**: it cannot be edited or deleted. Signing asks for a UDIN from your register and a digital signature certificate. Lekhya **records** the UDIN; it does not issue one, because only ICAI's portal can.

In one line

Everything a practice tracks (UDINs, signatures, deadlines, notices, reports) in one cockpit, on top of the full Lekhya ERP.

BEST FIT

- Practising CAs and small CA firms
- Firms that keep books for several client companies
- Teams that need reviewer and signer roles on audit reports

The six things it does

01
UDIN register
Record each UDIN, have it checked as you enter it, and tie it to the report you sign.

02
Audit reports
Forms 3CA, 3CB, 3CD, 3CEB and the Schedule III statutory audit, with stages and people.

03
DSC register
Every certificate, holder and validity, with those expiring in 30 days flagged.

04
Compliance calendar
GST, TDS, ROC, advance tax, audit, ITR and PF/ESI tasks per client.

05
Client portfolio
Open and overdue tasks, reports, notices and the next due date for each client.

06
White-label reports
Client-ready PDFs under your practice's name (Pramaan Pro).

Where it sits in the Prabhas SaaS suite

Seedha Bill, Samvaad and Sanchay capture; Lekhya books; Pramaan is where a CA reviews, signs and files.

REVIEW
Lekhya Pramaan ‹ this app

Sources · Lekhya Pramaan help page; Lekhya Features page (Pramaan); prabhassaas.in app registry and pricing.

CAPABILITIES

Running the practice

How a firm keeps many clients straight from one login.

01 Books for each client

Create a company for each client whose books you keep and switch between them from one login, up to your plan’s limit. Each has its own GSTIN and its own books.

LITE: UP TO 25 CLIENTS · PRO: UNLIMITED

02 All Clients portfolio

Every client you have a task, report or notice for, with open and overdue tasks, audit reports, open notices and the next due date.

03 Compliance calendar

A task list for the filings you owe each client: GST, TDS, ROC, advance tax, audit, ITR, PF/ESI. Move each from pending to in progress to filed. The top of the page counts what is overdue, due this week and pending.

04 Notice tracker

Log each notice with its type, number, date, authority and reply date. Move it through received, in progress, replied, closed or appealed. Open and overdue notices are counted.

05 Team assignment

Assign tasks, reports and notices to the people on your team, added under Settings → Users & Roles.

06 White-label PDF reports

Listed on Pramaan Pro: client-ready reports under your firm’s branding. Ask us for a sample report before you rely on it.

PRAMAAN PRO

Sources · Lekhya Pramaan help page (Books for each client, All Clients, Notice tracker, Team, Compliance Calendar); prabhassaas.in/pricing.

CAPABILITIES

Audit, UDIN and signing

The evidence trail of an engagement, kept together.

01 UDIN register

Paste the UDIN from the ICAI portal and add your membership number, the document, its date and the client. Lekhya checks it is **18 letters and digits** and **not already registered**, and tells you when the member number or year inside it does not fit. Search by client or UDIN; filter by generated or revoked.

PRAMAAN LITE AND ABOVE

02 Audit reports and forms

A report is the record of an engagement: who prepared, reviewed and signed it, its UDIN and certificate, its working papers and its stage. Forms 3CA, 3CB, 3CD and 3CEB, and the statutory audit under Schedule III, for a client and a financial year.

3CD / 3CB ON PRAMAAN PRO

03 Sign and certify

Signing asks for your UDIN and your DSC. A signed report is **locked**: it cannot be edited or deleted. A UDIN can be on one report only, and a revoked one cannot be chosen.

04 DSC register

Record each digital signature certificate with its holder, name and validity. Lekhya marks those expiring within **30 days** and those that have expired. Attach the public certificate only, never the private key of your token.

PRAMAAN PRO

05 Working papers

Upload files of up to 10 MB, give each a category and link it to an audit report. They are kept in private storage in your company’s own folder.

06 The full Lekhya ERP underneath

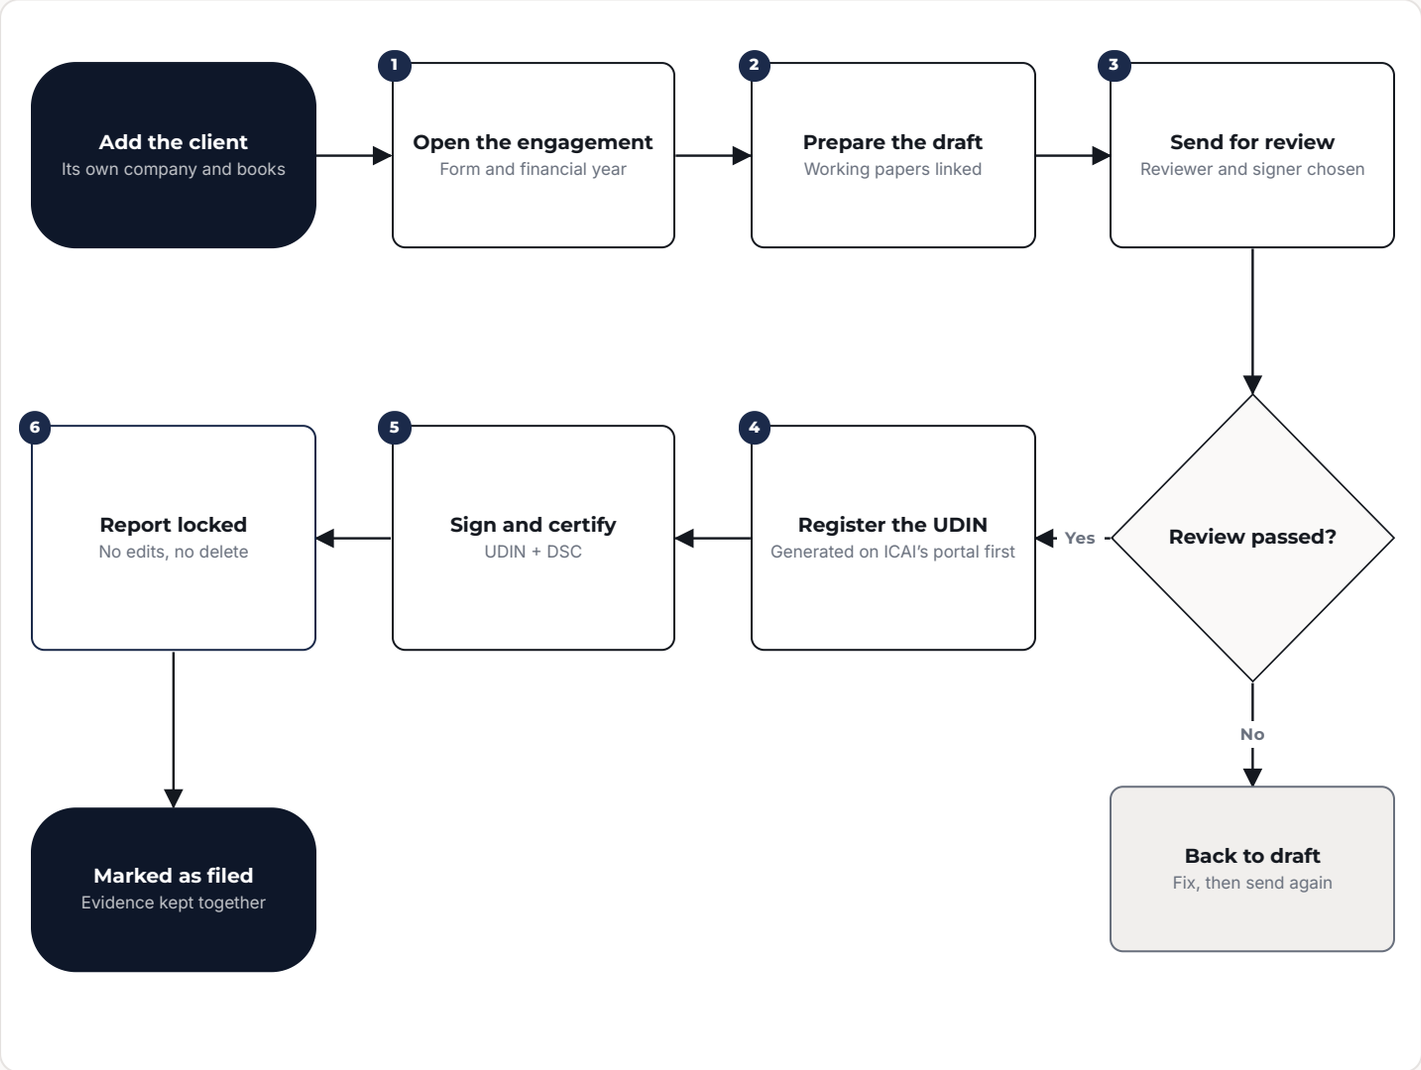

Everything in Lekhya ERP Pro: double-entry books, GST returns, bank reconciliation, AI proposals and the Seedha Bill connector.

Sources · Lekhya Pramaan help page and UDIN guide; Lekhya Features page; prabhassaas.in/pricing.

FUNCTIONAL FLOWCHART

An audit engagement, start to filed

Each stage has a person and a record. A signed report is locked, and a rejected review goes back to draft.

App does it · A person does it · AI proposes, a person decides · Decision · Start / finish

Numbered steps match the capability pages of this section.

People on the report

Choose a reviewer and a signer from the people on your team.

Stages

Draft, under review, signed, filed. Send for review, return to draft, sign, then mark as filed.

Calendar and notices

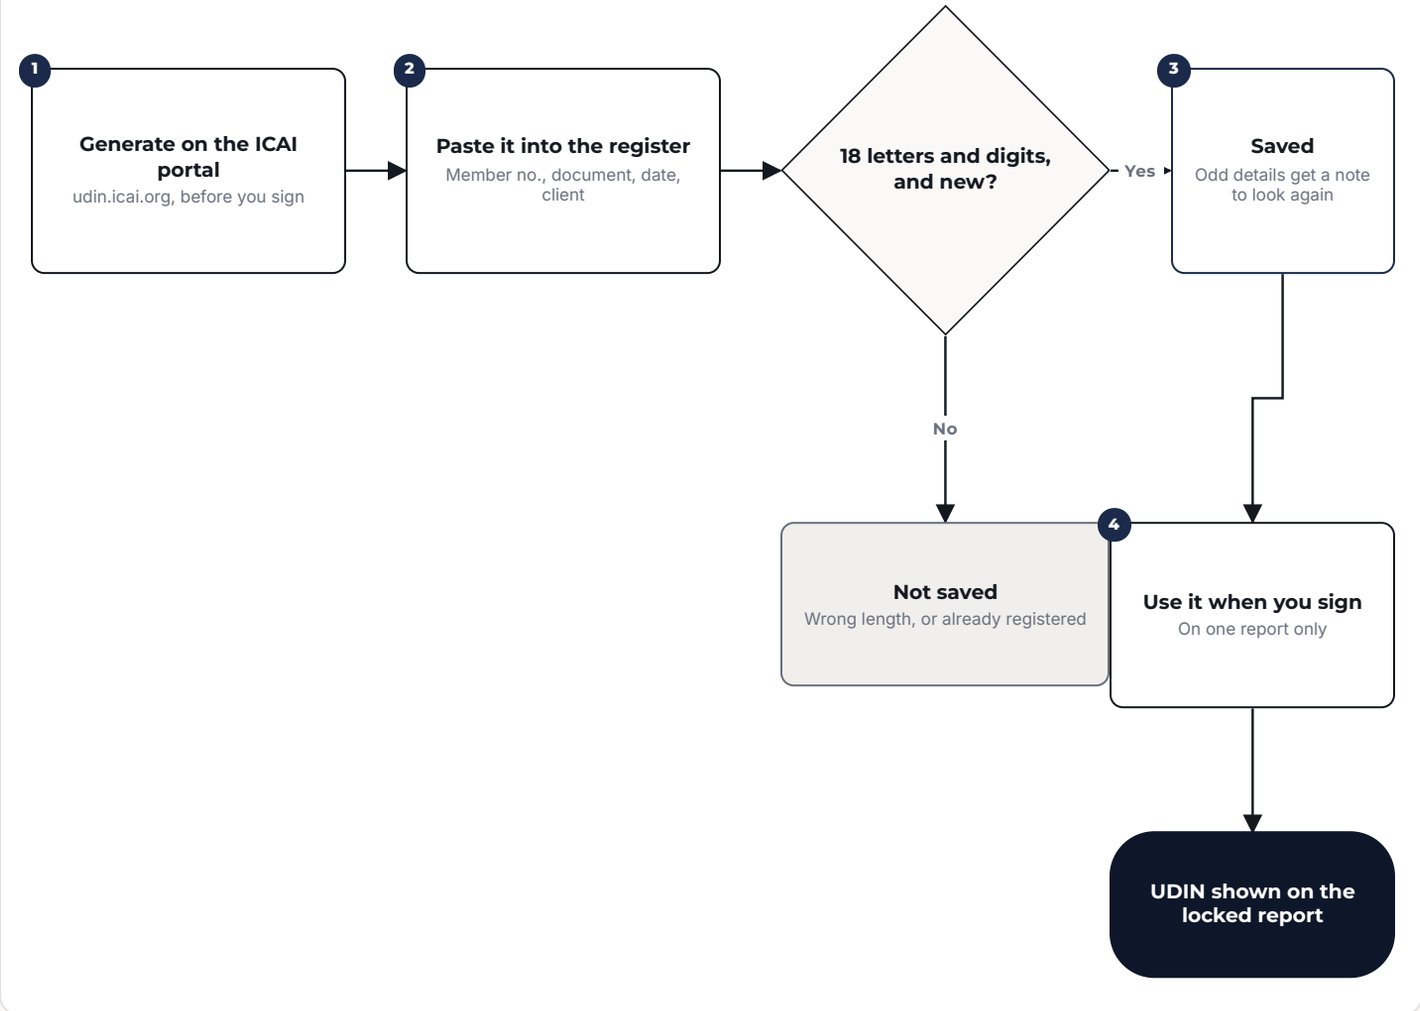

Filings and notices for the same client sit in the compliance calendar and notice tracker, assigned to people.

Sources · Lekhya Pramaan help page (Audit Reports, UDIN Register, DSC register).

FUNCTIONAL FLOWCHART

A UDIN: from ICAI's portal to your signature

Lekhya does not issue UDINs and does not contact ICAI. It checks that one was typed correctly and keeps your register.

App does it · A person does it · AI proposes, a person decides · Decision · Start / finish

Numbered steps match the capability pages of this section.

Saves, but says look again

The member number inside the UDIN is not the one you entered, the year looks wrong, or it does not begin with eight digits.

A mistake

The number cannot be edited. Revoke the entry with a reason, then register the right one. Both stay on the register.

Revoking is not cancelling

Revoking in Lekhya does not cancel the UDIN with ICAI. Cancel it on the portal, then revoke it here.

Sources · Lekhya Pramaan UDIN guide.

IN DAILY USE

Lekhya Pramaan for accountants, freelancers and CAs

Pramaan is written for the practice. Accountants who are not CAs and freelancers are honest non-fits: the fit check below says why.

Chartered Accountants

●●●● Built for

Pramaan is available for practising CAs with an ICAI membership number. It is the CA edition of Lekhya.

1. **Request access and start the trial**
   Request Pramaan access with your ICAI membership number. 14-day free trial.
2. **Add each client as a company**
   Each client has its own GSTIN and books. Switch between them from one login.
3. **Run the engagement**
   Prepare, review, register the UDIN, sign with your DSC, then mark filed. The signed report is locked.
4. **Keep the practice on track**
   Work the compliance calendar and notice tracker, and watch DSC expiry.

Accountants

●○○○ Limited

Pramaan is “a CA-only add-on”. If you keep books but are not a practising CA, Lekhya ERP gives you the same ledger, GST and bank tools without the audit and UDIN layer.

1. **Use Lekhya ERP instead**
   Everything in the books, GST returns, bank reconciliation and review queues is in Lekhya. See the Lekhya catalogue.
2. **Work alongside a CA client**
   A CA firm can add you to its team: tasks, reports and notices can be assigned to people on the team.

Freelancers

○○○○ Not designed for

Pramaan serves a CA practice. A freelancer who needs invoices wants Seedha Bill; one who wants books wants Lekhya.

1. **Invoice with Seedha Bill**
   GST invoices, free preview, one-time plans. See the Seedha Bill catalogue.
2. **Add Lekhya for the books**
   ERP Lite is one user and one company.

Sources · Lekhya Pramaan help page (“a CA-only add-on”); Lekhya Features page; prabhassaas.in/pricing.

PLANS & GETTING STARTED

Pramaan Lite or Pramaan Pro

Both plans carry the full Lekhya ERP Pro underneath. Pro removes the client cap and adds the audit forms, DSC tracking and white-label reports.

Pramaan Lite

₹999 /month · ₹9,990/year + 18% GST

Up to **25** client companies · **750** AI and **100** GST API actions/month · UDIN register and compliance calendar · everything in Lekhya ERP Pro

Pramaan Pro MOST CHOSEN

₹2,999 /month · ₹29,990/year + 18% GST

Unlimited client companies · **3,000** AI and **500** GST API actions/month · audit forms 3CD / 3CB and DSC tracking · white-label PDF reports and priority support

Also on the pricing page

- Annual billing gets 2 months free.
- Lifetime and Seedha Bill + Pramaan combo packs are listed on Pramaan's own pricing page.
- Samvaad on Android is free with Pramaan.

Plans side by side

	PRAMAAN LITE	PRAMAAN PRO
Price per month · per year (before GST)	₹999 · ₹9,990	₹2,999 · ₹29,990
Client companies	Up to 25	Unlimited
AI actions per month	750	3,000
GST API actions per month	100	500
UDIN register and compliance calendar	Yes	Yes
Everything in Lekhya ERP Pro	Yes	Yes
Audit forms 3CD / 3CB	—	Yes
DSC tracking	—	Yes
White-label PDF reports and priority support	—	Yes

— means not listed for that plan on the pricing page.

Getting started

1. **Create your Prabhas SaaS account**
   One login covers the suite, including Lekhya.
2. **Request Pramaan access**
   Give your ICAI membership number. Start the 14-day free trial.
3. **Add your clients**
   Create a company for each client whose books you keep, with its GSTIN.
4. **Open your first engagement**
   Add a task or an audit report and assign it to your team.

Price basis, stated plainly

- Prices on the pricing page **exclude GST**. 18% GST is added at checkout.
- Every plan starts with a **14-day free trial**.
- Pramaan is **available for practising CAs with an ICAI membership number**.
- Plans carry monthly AI and GST API action allowances.

Lekhya Pramaan: reading this page

No separate Pramaan roadmap is published. This page will list items once the owner approves them; nothing is implied by their absence.

What the labels mean

- **Proposed / Planned / Planning**: written down; not built; no date.
- **Needs owner decision / Awaiting decisions**: blocked on a choice that is not ours to make alone.
- **Built, awaiting keys**: the code exists; it is not live until the provider credentials are in place.
- **Deferred / Not being built**: considered and set aside on purpose.

What this page is not

A promise, a delivery schedule or a feature you can buy today. Items come from each product's own repository documents; where none exist, the page says so rather than inventing a roadmap.

Tell us what would help you most

Order is shaped by what customers need and by what can be built and checked properly. If something here matters to you, or something missing does, say so before you decide.

enquiry@prabhassaas.in · WhatsApp **+91 70215 03895**

TRUTH SHEET

What is confirmed, what depends, what is not included

Read this page before you decide. Pramaan records and organises your practice; it does not replace the portals or your professional judgement.

Confirmed in the product

- UDIN format checks on entry, duplicate refusal and a register with revocation
- Audit reports with stages, reviewer and signer, and locking on signature
- DSC register with 30-day expiry flags
- Compliance calendar, notice tracker and client portfolio
- Working papers up to 10 MB in private storage
- Everything in Lekhya ERP Pro underneath

Needs something else to work

- UDINs are generated on ICAI's portal; Lekhya only records them
- Audit forms 3CD/3CB, DSC tracking and white-label reports are on Pramaan Pro
- E-invoice, e-way bill and filing run through a GST service provider you connect
- A practising CA's ICAI membership number

Not included

- Issuing a UDIN or contacting ICAI: Lekhya can say a UDIN is well-formed, not that ICAI issued it
- Cancelling a UDIN with ICAI: do that on the portal
- Filing with the Income Tax or GST portals on your behalf without a connected provider
- Anything for non-CAs: see Lekhya ERP

Verify before you rely on it

- Which documents ICAI currently requires a UDIN for: the portal's directions change
- Any UDIN you are unsure of: confirm it on the ICAI portal
- Which GST service provider is live for your account before you depend on filing

Questions worth asking us before you buy

- How many client companies will I have in a year? Lite stops at 25
- Do I need 3CD/3CB and DSC tracking? Those are Pro
- Can my team work with reviewer and signer roles on day one?

Samvaad

MESSAGE TO INVOICE

Type a bill. Get a GST invoice.

Tell Samvaad a sale the way you would tell your accountant, or photograph a supplier's bill. Either becomes a draft that waits for a person to approve it, in Lekhya or Seedha Bill.

#BILL IN PLAIN WORDS · MULTI-PAGE BILL SCAN · OFFLINE OUTBOX · ANDROID

Samvaad · Sample data.

STATUS
Live on Android, v0.1.0

PLANS
Free with Lekhya ERP and Pramaan

WHERE
Android; Google Play listing coming soon

LANDS IN
Lekhya · Seedha Bill

OVERVIEW

A chat-shaped screen that does accounts

Samvaad is an input method, not a messenger. You talk to a screen that looks like a chat; what comes out is a sales invoice draft or a purchase entry.

Type **#bill 4 chairs @2000 to Ravi** and Samvaad parses it into an invoice draft, **checks the tax breakdown with you**, and sends it on. Parsing uses rules and a catalogue lookup first, with a language-model fallback for what rules cannot read.

Photograph a supplier's bill, up to eight pages of one purchase bill, and it becomes a purchase entry. The pages are validated, stored privately, read by AI, cross-checked against GST and totals, and shown to you before anything is sent. Everything lands in **Lekhya's approval queue** (or a **Seedha Bill** inbox) for a person to approve.

In one line

Say it or snap it; a person approves it; the books follow.

BEST FIT

- Owners and staff who capture sales and purchase bills on a phone
- Accountants who want bills arriving ready to approve
- Teams already on Lekhya, Pramaan or Seedha Bill

The six things it does

01
Type a sale
#bill in plain words becomes a GST invoice draft you check before sending.

02
Scan a purchase bill
Up to eight camera or gallery pages of one bill, read by AI into a reviewable draft.

03
Forms and catalogue
Structured invoice forms and catalogue lookup for when typing is not enough.

04
Works offline
An offline outbox holds entries until the network is back.

05
Right destination
Company sales and purchases go to that company's Lekhya books.

06
A person approves
Confirmed drafts wait in Lekhya's import queue. Nothing posts itself.

Where it sits in the Prabhas SaaS suite

Samvaad captures. Its drafts land in Lekhya (the books) or Seedha Bill (invoice issuing).

REVIEW
Lekhya Pramaan

Sources · Samvaad README and current-implementation page; prabhassaas.in app registry.

CAPABILITIES

Capturing entries

Four ways to get a sale or a purchase into the system without re-typing it.

01 **Type a bill with #bill**

"#bill 4 chairs @2000 to Ravi" becomes a sales invoice draft. Rules and catalogue lookup run first; a text-model fallback handles the rest. If the model fails, you get a reviewable or refused result, **never invented figures**.

02 **Multi-page bill scan**

Capture up to **eight pages** of one purchase bill from the camera or gallery. Pages are validated, stored privately and read by server-side AI vision. GST, printed totals and company are cross-checked, and **you review before it is sent**.

LIVE MODULE

03 **Structured forms and catalogue lookup**

Prefer fields to typing? Submit reviewed sales or purchases through the invoice form, with catalogue lookup.

04 **Offline outbox and history**

Entries made without a connection wait in an offline outbox. Conversation history and company switching are in the app.

05 **Duplicate protection**

Exact-image and business-key checks run before a duplicate can be filed. Retries reuse the same capture instead of making a second one.

Typing commands

What the input box understands today.

YOU TYPE	WHAT HAPPENS
#bill …	Parses a typed sale into an invoice draft for you to check
#scan	Sends you to the camera or gallery bill-scan workflow
#fix	Not available yet: message edit and delete is a separate capability

Automatic document-edge detection and cropping are not part of the live bill-scan module.

Sources · Samvaad README (current implementation); docs/CURRENT_IMPLEMENTATION.md; prabhassaas.in app registry.

CAPABILITIES

Routing and approval

A draft is a request, not a posting. The destination rules are decided by the server, not the phone.

01 **Company sales go to that company’s Lekhya books**

For a selected company, sales go to its Lekhya books. Purchases **require Lekhya**.

02 **Personal sales follow your entitlement**

A personal sale goes to the destination you are entitled to and prefer. With no preference, Lekhya wins when both products are available.

03 **Lekhya approval queue**

Confirmed Lekhya drafts wait in Lekhya’s import approval queue, where a person approves posting.

04 **Seedha Bill inbox**

Sales confirmed for Seedha Bill arrive in its Samvaad tab. Review one, open it, then issue it through the normal invoice flow.

05 **One backend, no second credential**

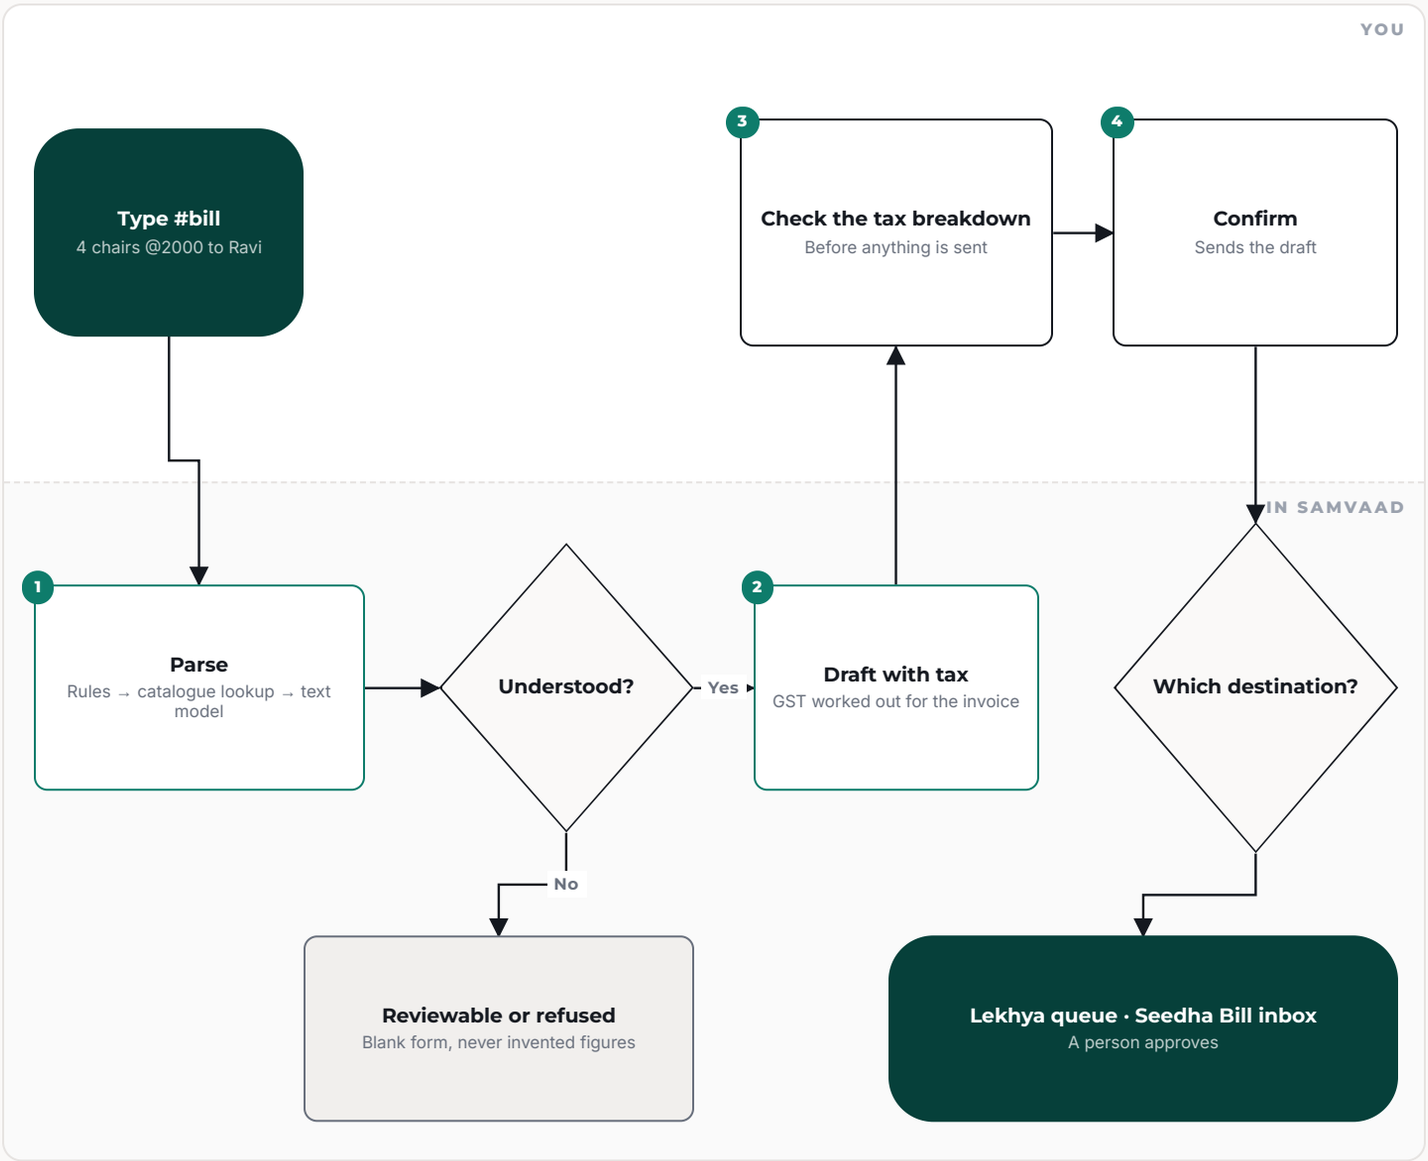

The app talks to one backend and never to Seedha Bill or Lekhya directly. Provider keys live on the server, never in the app.

Sources · Samvaad README and docs/CURRENT_IMPLEMENTATION.md; Seedha Bill app (Samvaad tab); Lekhya connector pages.

FUNCTIONAL FLOWCHART

From a typed bill to an approved draft

Every step before the last is a draft. A confirmation is not proof that an invoice was issued or a journal posted.

App does it · A person does it · AI proposes, a person decides · Decision · Start / finish

Numbered steps match the capability pages of this section.

Company sales
Go to that company's Lekhya books.

Personal sales
Go to your entitled destination; Lekhya wins when both are available.

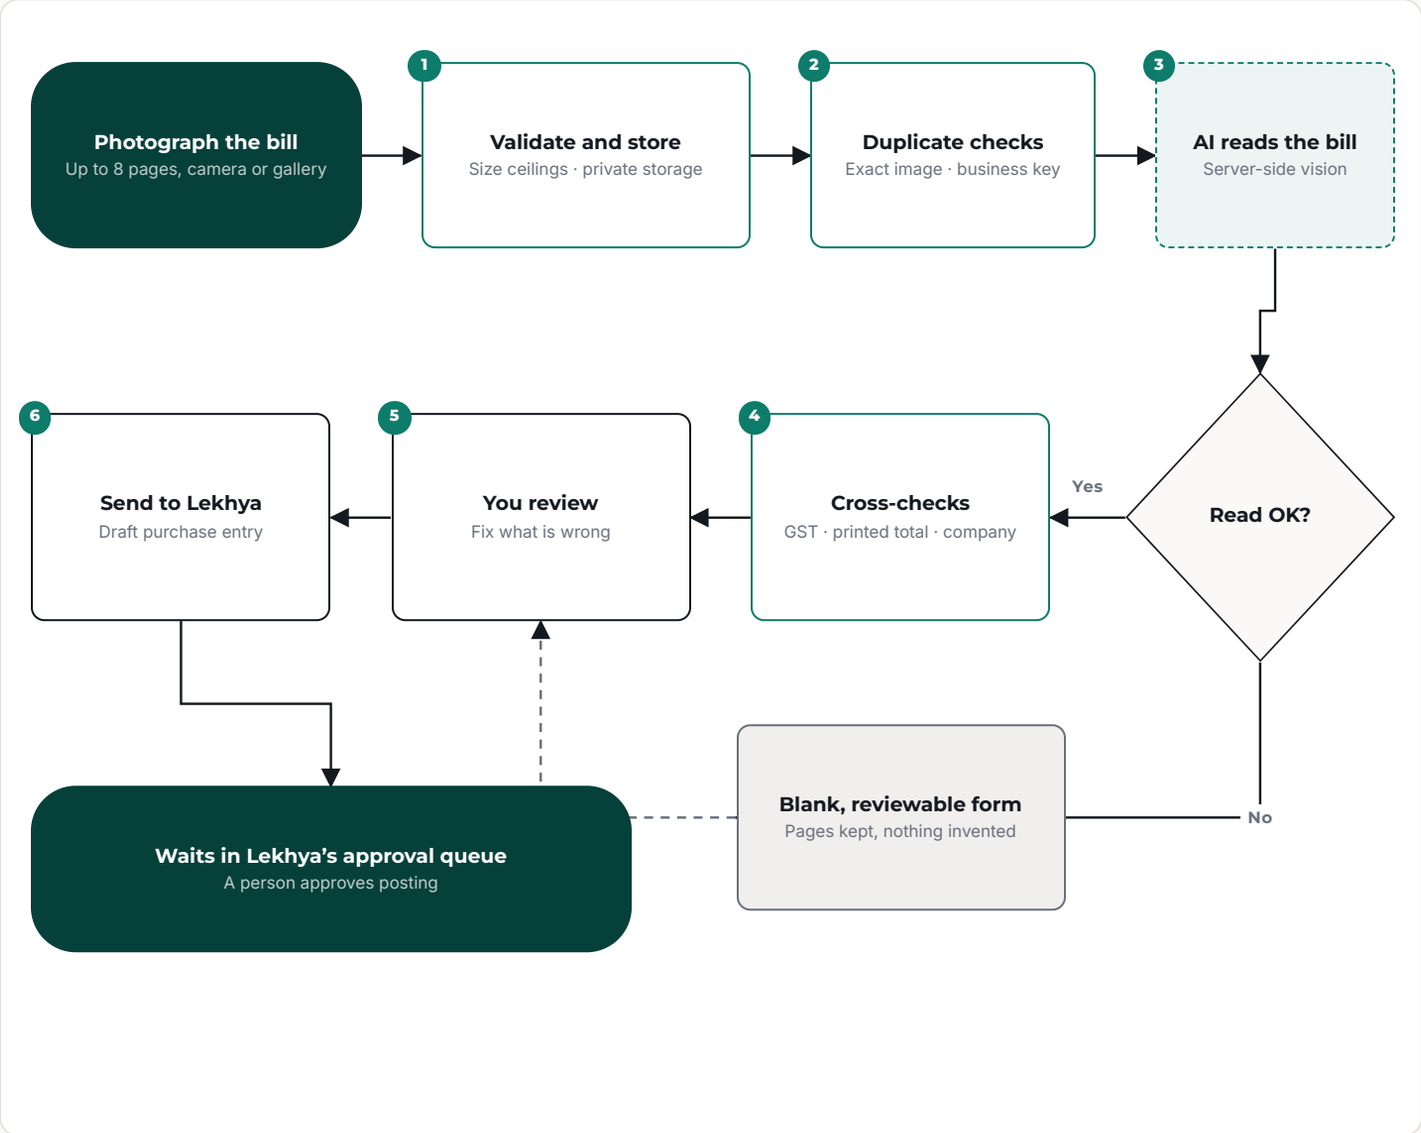

A confirmation is a request
Posting needs a person in Lekhya, or invoice issue in Seedha Bill.

Sources · Samvaad README and docs/CURRENT_IMPLEMENTATION.md; Seedha Bill app (Samvaad tab); Lekhya connector pages.

FUNCTIONAL FLOWCHART

From a supplier’s bill to a purchase entry

A failed AI read never loses your pages and never invents data: it falls back to a blank, reviewable form.

App does it · A person does it · AI proposes, a person decides · Decision · Start / finish

Numbered steps match the capability pages of this section.

What “live” means here

Camera or gallery capture and review. Automatic edge detection and cropping are not part of it.

Purchases need Lekhya

A purchase entry has no other destination.

AI proposes

Every extracted figure is shown to you before it is sent.

Sources · Samvaad docs/CURRENT_IMPLEMENTATION.md (Multi-page Bill Scan); Samvaad README.

IN DAILY USE

Samvaad for accountants, freelancers and CAs

Samvaad serves whoever captures the paperwork on a phone. Its drafts are always checked by a person before they count.

Accountants

●●●● Built for

Supplier bills arrive as photographs; Samvaad turns them into purchase drafts waiting in the Lekhya approval queue, so you review instead of key in.

1. **Capture at source**
   The owner or staff photograph each supplier bill, up to eight pages.
2. **Review the draft**
   GST, printed total and company are cross-checked and shown. Fix what is wrong.
3. **Approve in Lekhya**
   Drafts wait in the import approval queue. Posting is your decision.

Freelancers

●●●○ Works well

Type the sale as you would tell an accountant; Samvaad drafts the invoice. It needs a Lekhya or Seedha Bill entitlement and is an early Android release.

1. **Type #bill**
   “#bill 4 chairs @2000 to Ravi” becomes an invoice draft with tax worked out.
2. **Check and confirm**
   Look at the tax breakdown first. Nothing is sent until you confirm.
3. **Issue it**
   Open the draft in Seedha Bill’s Samvaad tab and issue it through the normal invoice flow.

Chartered Accountants

●●●○ Works well

Samvaad is included with Lekhya Pramaan, so clients’ captured bills can reach the books you review.

1. **Include it in the engagement**
   Samvaad is free with Pramaan on Android.
2. **Switch the acting company**
   The app supports company switching, and the server validates company membership and entitlements.
3. **Keep your review as the control**
   A confirmed draft is not a posting. Lekhya’s queue is where you decide.

Sources · Samvaad README and docs; prabhassaas.in app registry (“free with Lekhya ERP and Pramaan”); Seedha Bill app; Lekhya connector pages.

PLANS & GETTING STARTED

Free with Lekhya ERP and Pramaan

Samvaad has no price of its own. It comes with Lekhya ERP and Lekhya Pramaan, on Android.

With Lekhya ERP MOST CHOSEN

Included

Android app, v0.1.0 · multi-page bill scan · #bill · offline outbox

With Lekhya Pramaan

Included

Same app and features, for practising CAs

What is still to come

From the build notes (4 Oct 2026). These are not part of the commercial promise today.

Local storage isolation
Account, company and destination isolation in the app's local storage.

Corrections
The full correction lifecycle (#fix, edit and delete) and learning from confirmed corrections.

Status push
Push notifications about a draft's status.

Getting started

1. **Have a Lekhya or Seedha Bill account**
   Samvaad uses your Prabhas SaaS login and checks what you are entitled to.
2. **Install the Android app**
   The Google Play listing is coming soon; ask us for the current Android build.
3. **Pick the company**
   Choose the company you are acting for, so drafts go to the right books.
4. **Type #bill, or scan a purchase bill**
   Check the draft and confirm. A person then approves it.

Price basis, stated plainly

- The Google Play listing is coming soon. iOS is kept compiling but not shipped.
- Samvaad is **free with Lekhya ERP and Pramaan**. Those plans' prices are on the pricing page and exclude GST.
- A plan with Lekhya starts with a **14-day free trial**.
- Attributing AI usage to accounts is still being hardened, so allowances for scanning may change.
- Version **0.1.0**: an early release.

Source · prabhassaas.in app registry (Samvaad) and pricing; Samvaad README, read 22 Oct 2026. Prices change: the pricing page is the current record.

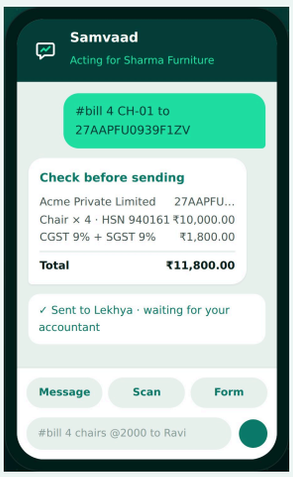

IN THE APP

Type a bill. Get a GST invoice.

Tell Samvaad a sale the way you would tell your accountant, or photograph a supplier's bill. Either becomes a draft that waits for a person to approve it, in Lekhya or Seedha Bill.

#BILL IN PLAIN WORDS · MULTI-PAGE BILL SCAN · OFFLINE OUTBOX · ANDROID

Type a bill as a message; Samvaad shows "Check before sending" and sends it to Lekhya for your accountant

STATUS

WHAT'S NEXT

Samvaad: improvements anticipated

Only items that are written down in the product's own documents. None is dated.

PLANNED, LATER

iOS app

Samvaad ships on Android first. The code stays portable and iOS is kept compiling, so adding it later is an implementation, not a redesign.

Source: Samvaad DECISIONS.md, D-026

DEFERRED

Web version

Deferred when version 1 was narrowed to a private Android invoice-capture app.

Source: Samvaad DECISIONS.md, D-017

DEFERRED

GST-law and circular Q&A

Deferred past version 1 because it amounts to tax advice and needs separate treatment.

Source: Samvaad DECISIONS.md

NOT BEING BUILT

A public messenger

The full messenger design is archived and is not to be built from. Samvaad stays an invoice-capture app with no person-to-person chat.

Source: Samvaad DECISIONS.md, D-017

Samvaad: reading this page

Samvaad is an early Android release (v0.1.0). Nothing on this page is dated or promised.

What the labels mean

- **Proposed / Planned / Planning**: written down; not built; no date.
- **Needs owner decision / Awaiting decisions**: blocked on a choice that is not ours to make alone.
- **Built, awaiting keys**: the code exists; it is not live until the provider credentials are in place.
- **Deferred / Not being built**: considered and set aside on purpose.

What this page is not

A promise, a delivery schedule or a feature you can buy today. Items come from each product's own repository documents; where none exist, the page says so rather than inventing a roadmap.

Tell us what would help you most: enquiry@prabhassaas.in · WhatsApp +91 70215 03895.

TRUTH SHEET

What is confirmed, what depends, what is not included

Samvaad is an early release. This page says what is live, what depends on other apps and what is deliberately missing.

Confirmed in the product

- #bill parsing, structured forms, catalogue lookup, company switching and offline outbox
- Multi-page bill scan: up to eight pages, validated, stored privately, read by server-side AI vision and cross-checked
- Routing: company sales to that company's Lekhya books; purchases to Lekhya
- Provider keys stay on the server, not in the app

Needs something else to work

- Purchases and company sales need Lekhya
- Seedha Bill drafts need Seedha Bill to issue them
- An Android phone; iOS is not shipped
- The Samvaad Android build you are given: the Play listing is coming soon

Not included

- Person-to-person chat: Samvaad is not a messenger
- Automatic document-edge detection and perspective cropping
- #fix and message edit/delete
- Status push notifications

Verify before you rely on it

- A confirmation is not proof that an invoice was issued or a journal posted: check Lekhya or Seedha Bill
- The Android builds are early (v0.1.0). Check which build you are on
- AI read quality on your own bills: try real ones during the trial
- AI usage and billing attribution: still being hardened in this release

Questions worth asking us before you buy

- Which Android build should I install today?
- Can you walk me through a bill scan on my own supplier bills?
- Which destination will my company's drafts use?

WORKS WITH
Seedha Bill · Shopify

OVERVIEW

Stock you can trust, a counter that keeps selling

Sanchay owns the catalogue, SKUs and barcodes, warehouses and bins, batches and serials, the stock ledger, procurement with quality checks, and the point of sale.

Every stock change is a **movement in an append-only ledger**, posted in the same transaction as the document that caused it. The database refuses negative stock: if two counters sell the last unit, one wins. A proof routine checks that every balance equals the sum of its ledger rows.

The counter prices come from the catalogue and are **GST-inclusive**. Cash, UPI, card, payment link and credit tenders can be split. If the network drops, **cash sales continue offline** and replay later; an offline sale the stock cannot back is kept and flagged, never discarded.

In one line

Sell at the counter, receive at the dock, and let one ledger explain every unit.

BEST FIT

- Shops with one or more counters
- Distributors and warehouses with bins, batches or serials
- Sellers who also run a Shopify store

The six things it does

01
Catalogue
SKUs, variants, barcodes (GS1 and internal), batches, serials, expiry.

02
GST-inclusive POS
Split tenders, offline queue, 3-inch receipts, returns.

03
Append-only stock ledger
Every movement recorded; balances provable; negatives refused.

04
Procurement and QC
Purchase orders with maker-checker approval, receipts, quality inspection.

05
Warehouse execution
Putaway, picking, packing, dispatch, cycle counts, transfers.

06
Shopify and Seedha Bill
Stock sync and order posting with Shopify; sales feed invoicing.

Where it sits in the Prabhas SaaS suite

Sanchay captures stock and sales. Its sales events are meant to become Seedha Bill invoices, which in turn reach Lekhya's books.

REVIEW
Lekhya Pramaan

Sources · Sanchay README and docs; prabhassaas.in app registry and pricing.

CAPABILITIES

Catalogue, counter and ledger

What happens at the shelf and at the till.

01 **Catalogue with SKUs, barcodes, batches and serials**

SKU and barcode are unique per tenant. GS1 codes compare as GTIN-14, so UPC-A and EAN-13 forms match, with check digits validated. Real GTIN-13s come only from your own GS1 prefix; otherwise internal Code 128 labels are used.

02 **GST-inclusive POS**

Prices come from the catalogue, never the device. The tax regime follows the store's GST registration: regular gets CGST+SGST (same state) or IGST (customer GSTIN in another state); composition or unregistered gets no GST. The payable is rounded to the rupee with a recorded round-off.

03 **Split tenders**

Cash, UPI, card, payment link and credit must settle the total exactly. Cash records change. Credit needs a named customer with a phone number. Tenders are recorded; payment processing is provider-backed.

PAYMENT COLLECTION NEEDS A PROVIDER

04 **Offline cash sales**

The device's sale id makes a replay safe. Online overselling is refused. An offline sale the stock cannot back is **recorded as-is** with a conflict status, never discarded and never driving stock negative. After stock is corrected, retrying posts it.

05 **Returns**

Pro-rata refund of the paid line amount with discounts honoured, restocked as available, returned or damaged. The database refuses returning more than was sold, even concurrently.

06 **Append-only stock ledger**

Receipts, sales, returns, damage, wastage, counts, transfers and state changes are all movements. Reasons are required for adjustments, damage and write-offs. Posted rows and movements cannot be edited.

Sources · Sanchay docs/domain/inventory.md and docs/domain/procurement-pos.md; Sanchay README; prabhassaas.in app registry.

CAPABILITIES

Buying, warehouse and channels

The back of the shop: getting stock in, moving it, and keeping channels honest.

01 **Purchase orders with maker-checker**

Draft, approved, partially received, received. The approver cannot be the creator unless owner or admin. Goods receipts cannot over-receive and are idempotent.

MAKER-CHECKER APPROVALS: OPERATIONS PLAN

02 **Quality control**

One inspection per receipt line: accepted plus rejected equals received, a defect type for rejections, a score from 1 to 10. Accepted stock becomes available; rejected is blocked and can be returned to the vendor.

03 **Reorder recommendations**

A reorder point per item and warehouse yields recommendations with urgency, days of cover and plain-language reasons. A person turns selected ones into **draft** purchase orders. **Nothing is ordered automatically.**

04 **Warehouse execution**

Putaway, picking, packing and dispatch, plus cycle counts and transfers between locations of the same legal entity and GST registration.

OPERATIONS PLAN

05 **Shopify and channel operations**

Batch-aware stock sync and order posting with Shopify.

OPERATIONS PLAN

06 **Dashboard**

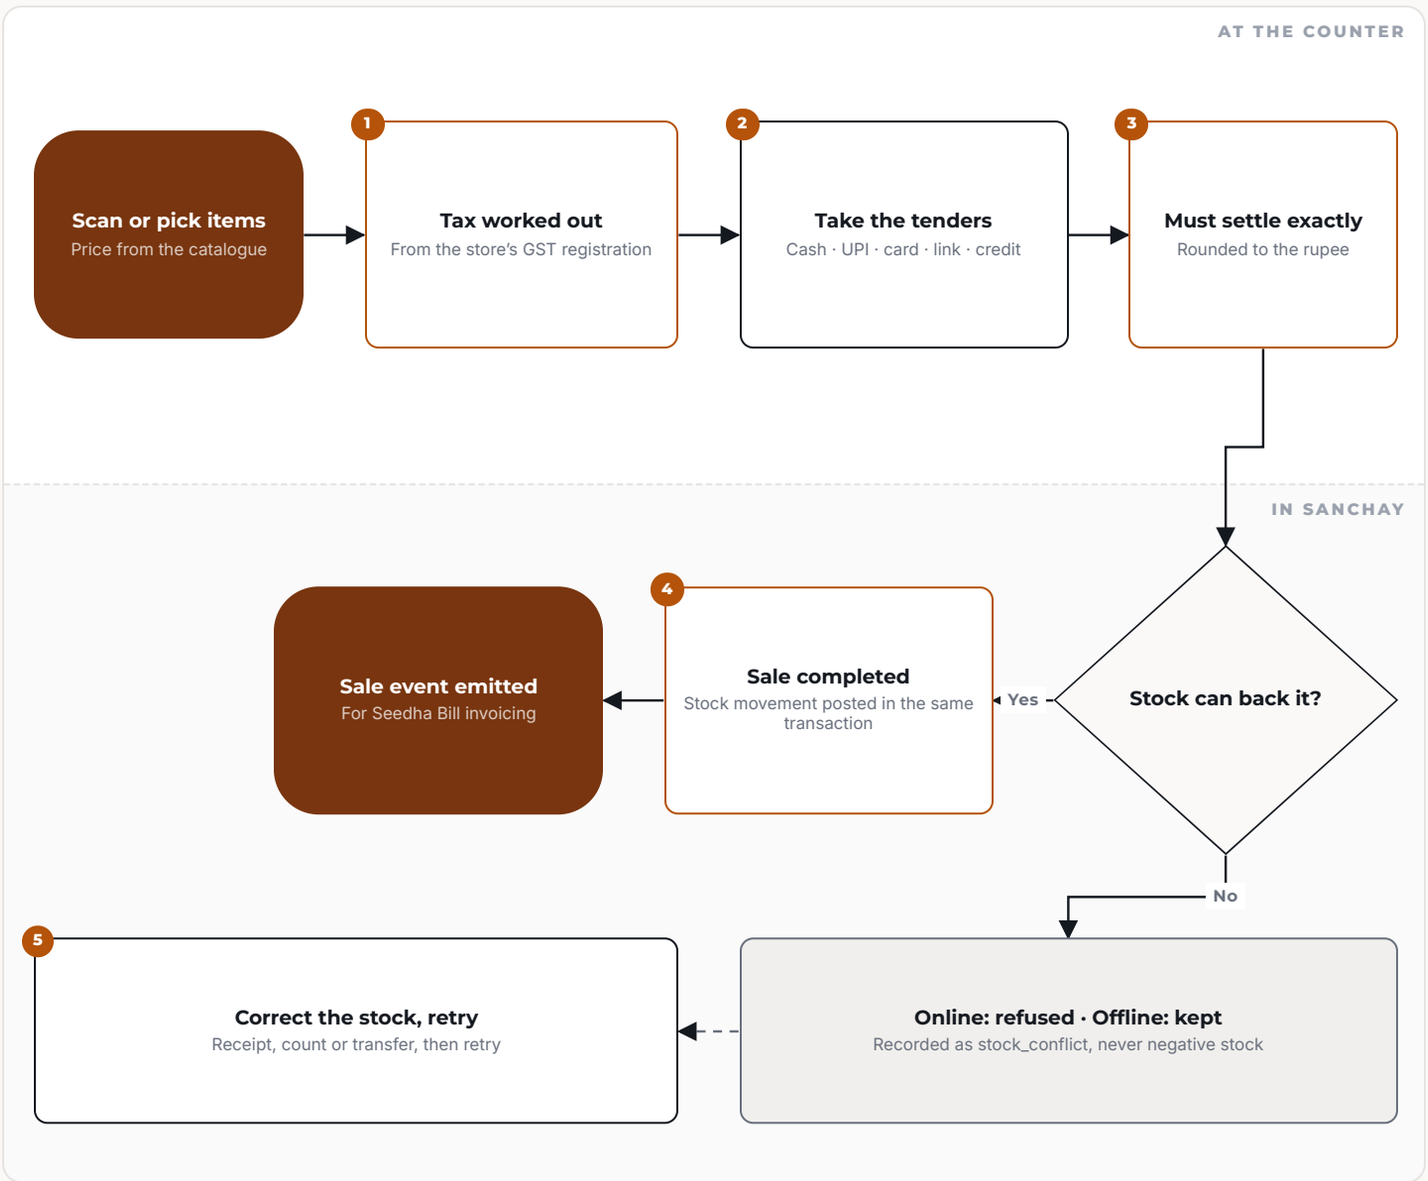

Inventory value at standard cost (items without a cost are counted as unvalued, never valued at zero), stockouts, below-reorder counts, dead stock, pending QC, open conflicts, open purchase orders and today’s sales.

Sources · Sanchay docs/domain/procurement-pos.md and inventory.md; docs/domain/shopify.md (named in the README); prabhassaas.in pricing.

FUNCTIONAL FLOWCHART

A counter sale, online or offline

The stock record, not the till, has the last word. A sale it cannot back is kept and flagged, never lost.

App does it · A person does it · AI proposes, a person decides · Decision · Start / finish

Numbered steps match the capability pages of this section.

Returns

Pro-rata refund, restocked as available, returned or damaged.

Idempotent

The device's sale id makes offline replay safe.

Invoices are Seedha Bill's

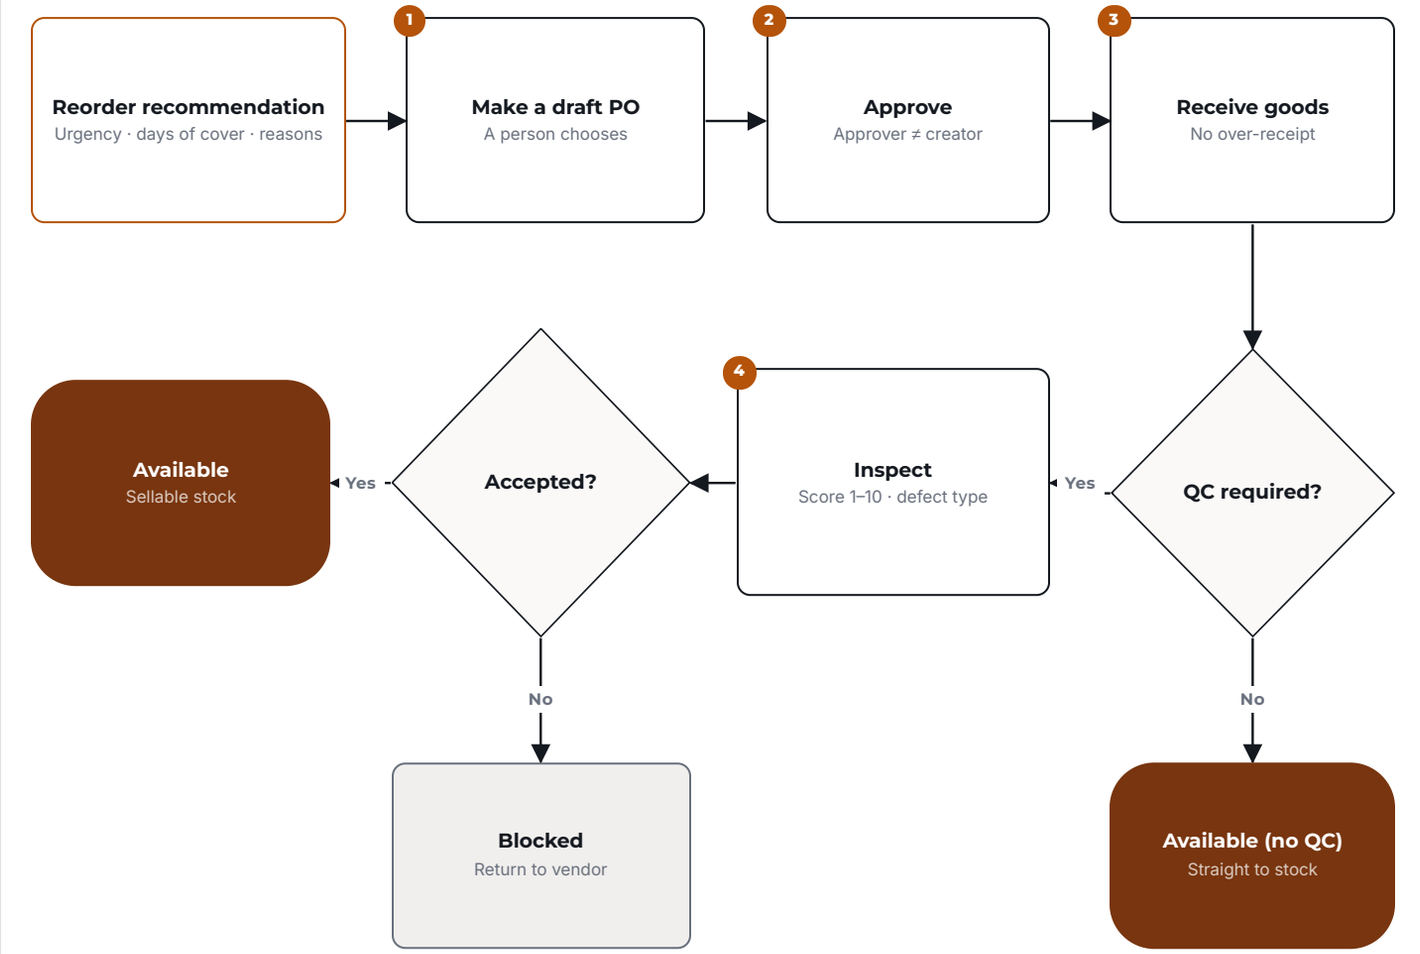

A sale emits an event; the recipe turns it into an invoice or bill of supply.

Sources · Sanchay docs/domain/procurement-pos.md and inventory.md.

FUNCTIONAL FLOWCHART

Stock in: from reorder to available

Nothing is ordered automatically, nothing is received beyond the order, and QC can hold stock before it is sellable.

App does it · A person does it · AI proposes, a person decides · Decision · Start / finish

Numbered steps match the capability pages of this section.

Maker-checker

Needs the procurement-approve permission for the warehouse's legal entity.

Vendor performance

Fill rate, on-time rate, defect rate and QC score, shown with sample sizes.

GSTIN-checked vendors

Vendor GSTINs are checksum-validated and the state is derived.

Sources · Sanchay docs/domain/procurement-pos.md (Procurement, QC, Reorder).

IN DAILY USE

Sanchay for accountants, freelancers and CAs

Sanchay is a shop-and-warehouse tool. It reaches accountants, CAs and freelancers mostly through the clients they serve.

Accountants

●●○○ Indirect

Your clients with stock run Sanchay; you meet it through its ledger, valuation and sales events rather than as a tool you operate.

1. **Read the stock evidence**
   An append-only ledger with reasons for adjustments, and balances provable against the movements.
2. **Use the valuation honestly**
   The dashboard values stock at standard cost and counts items without a cost as unvalued, never as zero.
3. **Expect invoices through Seedha Bill**
   Counter sales emit events that become Seedha Bill invoices, which can then reach Lekhya for approval.

Freelancers

○○○○ Not designed for

Sanchay is built for counters, shops and warehouses. A freelancer who sells services needs Seedha Bill.

1. **Invoice with Seedha Bill**
   GST invoices, free preview, one-time plans. See its catalogue.
2. **Come back if you open a shop**
   Sanchay Starter is one location, one counter, two users.

Chartered Accountants

●○○○ Limited

A CA does not operate a shop's counter. The relevance is what a client's Sanchay can evidence: counts, ledgers, approvals and audit trails.

1. **Ask for the counts**
   Cycle counts use optimistic concurrency and record the expected stock before.
2. **Review approvals**
   Purchase orders require a maker-checker approval step.
3. **Reconcile to the books**
   Sales events feed Seedha Bill invoices, which flow to Lekhya through its review queue.

Sources · Sanchay README and docs; prabhassaas.in app registry and pricing.

PLANS & GETTING STARTED

Starter, Retail or Operations

Every plan starts with a 14-day free trial. After the trial Sanchay stays locked until you pay.

Starter

₹299 /month · ₹2,990/year + 18% GST

1 location · 1 POS counter · 2 users · catalogue, SKUs and barcodes · GST-inclusive POS · offline cash sales and 3-inch receipts · stock and purchase receiving

Retail MOST CHOSEN

₹699 /month · ₹6,990/year + 18% GST

2 locations · 3 counters · 5 users · everything in Starter · batches, serials and barcode labels · cycle counts, bundles and combo packs · vendor and QC insights, bulk operations

Operations

₹1,499 /month · ₹14,990/year + 18% GST

5 locations · 10 counters · 15 users · everything in Retail · putaway, pick, pack and dispatch · maker-checker approvals · Shopify and channel operations, dashboards

Also on the pricing page

- Add-ons: extra counter ₹199/month · extra location ₹299/month · 5 more users ₹199/month.
- No fee on UPI or card payments through Sanchay and no cap on products.

Plans side by side

	STARTER	RETAIL	OPERATIONS
Price per month · per year (before GST)	₹299 · ₹2,990	₹699 · ₹6,990	₹1,499 · ₹14,990
Locations · counters · users	1 · 1 · 2	2 · 3 · 5	5 · 10 · 15
Catalogue, SKUs, barcodes; GST-inclusive POS; offline cash sales	Yes	Yes	Yes
Batches, serials, barcode labels; cycle counts, bundles, combo packs	—	Yes	Yes
Vendor and QC insights, bulk operations	—	Yes	Yes
Putaway, pick, pack and dispatch	—	—	Yes
Maker-checker approvals	—	—	Yes
Shopify and channel operations, dashboards	—	—	Yes

— means not listed for that plan on the pricing page.

Getting started

1. **Create your Prabhas SaaS account**
   Sanchay signs in with the same login as every Prabhas app.
2. **Start the 14-day trial**
   No card needed. Pick Starter, Retail or Operations when you are ready.
3. **Load the catalogue**
   Add products with SKUs and barcodes, batches or serials where you track them.
4. **Ring up a sale**
   Open the POS counter, scan, take the tenders. Receive stock against purchase orders.

Price basis, stated plainly

- Prices on the pricing page **exclude GST**. 18% GST is added at checkout.
- **14-day free trial**, no card needed. After 14 days Sanchay asks for payment and stays locked until you pay.
- Monthly or yearly billing.
- Tenders are recorded; collecting card or UPI money is provider-backed.

Source · prabhassaas.in/pricing (Sanchay section), read 22 Oct 2026. Prices change: the pricing page is the current record.

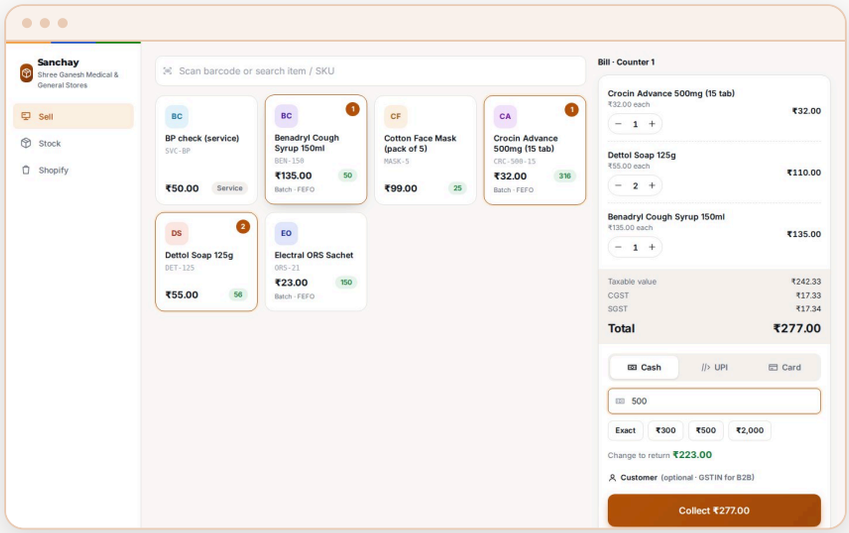

IN THE APP

TRUTH SHEET

What is confirmed, what depends, what is not included

Sanchay is deep on stock integrity. This page says what that includes and what still depends on a provider or another app.

Confirmed in the product

- An append-only stock ledger with provable balances and refused negatives
- GST-inclusive POS, split tenders, offline replay with conflict handling, returns
- Purchase orders with maker-checker, goods receipts without over-receipt, QC inspection
- Barcodes: GS1 as GTIN-14 with check digits, or internal Code 128
- Reorder recommendations that only ever create drafts

Needs something else to work

- Collecting UPI or card money needs a payment provider; tenders are recorded
- The Sanchay → Seedha Bill invoice flow needs Seedha Bill's side of the connection
- Shopify sync and warehouse execution are on Operations
- Warehouse transfers need the same legal entity and GST registration

Not included

- Automatic purchase ordering: a person always approves
- Valuing unvalued items at zero: they are shown as unvalued
- Invoices created inside Sanchay: invoices are Seedha Bill's
- A free plan: Sanchay locks after the 14-day trial until you pay

Verify before you rely on it

- Whether sales are reaching Seedha Bill invoices in your setup: confirm the connection before you rely on it
- Which payment provider is live for UPI, card and payment links on your account
- Your own GST treatment for each item: Sanchay applies the registration regime you set

Questions worth asking us before you buy

- How many counters and locations do I need? Plans cap both
- Do I need batches and serials? They start at Retail
- Do I sell on Shopify? That is on Operations

Shilp3D

BLUEPRINT DRAFTING

Precision 2D drafting in your browser.

Floor plans, structural layouts and MEP symbols at real drawing scales, exported as DXF, PDF, SVG or PNG. Naksha, the civil planning module, is live today.

REAL DRAWING SCALES · MEP SYMBOLS · DXF · PDF · SVG · PNG · OFFLINE PWA

Shilp3D · A sample drawing.

STATUS
Live: Naksha (civil)

PLANS
Free · Pro ₹299/mo or ₹2,999/yr + 18% GST

TRIAL
14-day Pro trial

WORKS
In the browser, offline

OVERVIEW

A drafting tool, not a drawing app

Naksha (नक्शा), the word an Indian contractor or approvals office uses for a building plan, is Shilp3D's civil planning and construction module.

Every coordinate is stored in **millimetres**, line weights follow **ISO 128** pen grades, and **snapping resolves by intent rather than proximity**. Exports are dimensionally correct: a 3 m wall measures 3 m when you open the SVG in Illustrator.

It runs **entirely in your browser**: drawings save to your own device and are not uploaded anywhere unless you use Pro cloud sync. Output comes from the drawing model, not a screenshot, so vectors stay editable.

In one line

Draw to scale, place the symbols, measure it, and export something the next person can use.

BEST FIT

- Civil engineers, architects and draughtspeople
- Contractors and approvals-office submissions
- Anyone who wants CAD-grade precision without installing CAD

The six things it does

01
Precision
Millimetre storage, ISO 128 line weights, intent-based snapping, flexible unit entry.

02
Plans and structure
Walls with hatching and auto-chaining, columns, beams, doors, windows, rooms with areas.

03
Building services
Electrical, plumbing, HVAC and fire-safety symbols; the layer switches for you.

04
Live measurements
Length, angle, area and perimeter update on the cursor as you draw.

05
Output that opens elsewhere
DXF R12, PDF with title block, layered SVG, PNG to 600 DPI, JSON project files.

06
Offline, then cloud
Local autosave and offline PWA; Pro adds cloud sync across devices.

Where it sits in the Prabhas SaaS suite

Shilp3D is a standalone app. It shares the Prabhas SaaS login and billing, but it does not feed or depend on the finance apps.

CAPTURE	→	BOOK	→	REVIEW
Seedha Bill **Samvaad** **Sanchay**		**Lekhya AI**		**Lekhya Pramaan**

Shilp3D is a standalone app: it does not need the rest of the suite and does not feed it.

Sources · Shilp3D README and published app page; prabhassaas.in app registry.

CAPABILITIES

Drawing and precision

What the drafting engine does while you draw.

01 **Infinite canvas and set-up**

Pan, zoom and rotate; square, dot, hex and isometric grids; guides, rulers, a north compass and a graphic scale bar. Choose units (mm, cm, m, inches, feet, architectural) and a scale (1:50, 1:100, 1:200 and imperial).

02 **Intent-based snapping**

Endpoint, midpoint, centre, intersection, perpendicular, guide and grid snapping, resolved by priority. Shift locks ortho; angular constraints; entry such as 2400, 2.4m, 8' or 1' 6".

03 **Drafting tools**

Lines, polylines, rectangles, circles, arcs and polygons; walls with poché hatching and auto-chaining; columns, beams, doors with swing arcs, windows; rooms with automatic area. 77 scaled plan symbols for furniture and fixtures.

04 **Building services (MEP)**

Electrical, plumbing, HVAC and fire-safety symbols to IEC 60617 / IS 962 conventions: sockets, switches, luminaires, distribution boards, drains, traps, valves, split and cassette AC, sprinklers, detectors, hydrants. Picking a symbol switches to that discipline’s layer.

05 **Live measurements**

Length, angle, radius, diameter, side count, running total, perimeter and area update on the cursor while you draw.

06 **Annotation and layers**

Engineering dimensions with witness lines and arrowheads, text with leaders and revision clouds. Eleven default layers (one per services discipline) with visibility, locking, colour and print exclusion.

Sources · Shilp3D README (Features) and USER_GUIDE.

CAPABILITIES

Output, constructions and cloud

Getting the drawing out, and keeping it with you.

01 **Exports you can use**

PDF (A4 to A0, Letter, ARCH D/E, with title block) · **SVG** (layered, Illustrator-ready) · **DXF R12** (AutoCAD, BricsCAD, LibreCAD, FreeCAD) · **PNG** (96–600 DPI) · portable **JSON** projects. Exports are never restricted.

02 **Combine shapes**

Merge, subtract, intersect and exclude closed shapes the way Illustrator's Pathfinder works. Shared edges and touching corners are handled; a subtraction that encloses a void returns it as a hole.

03 **Quantity take-off**

Measure quantities straight off the drawing.

04 **Geometry constructions**

Compass-and-straightedge constructions for school mathematics, drawing their arcs on a Construction layer and showing the numbered method.

05 **3D massing preview**

A lightweight 3D preview. Shilp3D is a precision 2D platform, **not a BIM replacement**.

06 **Cloud sync with Pro**

Sign in with your Prabhas SaaS account. Drawings sync as you work with a 60-second ceiling, with conflict handling when two devices disagree, version history and a storage meter.

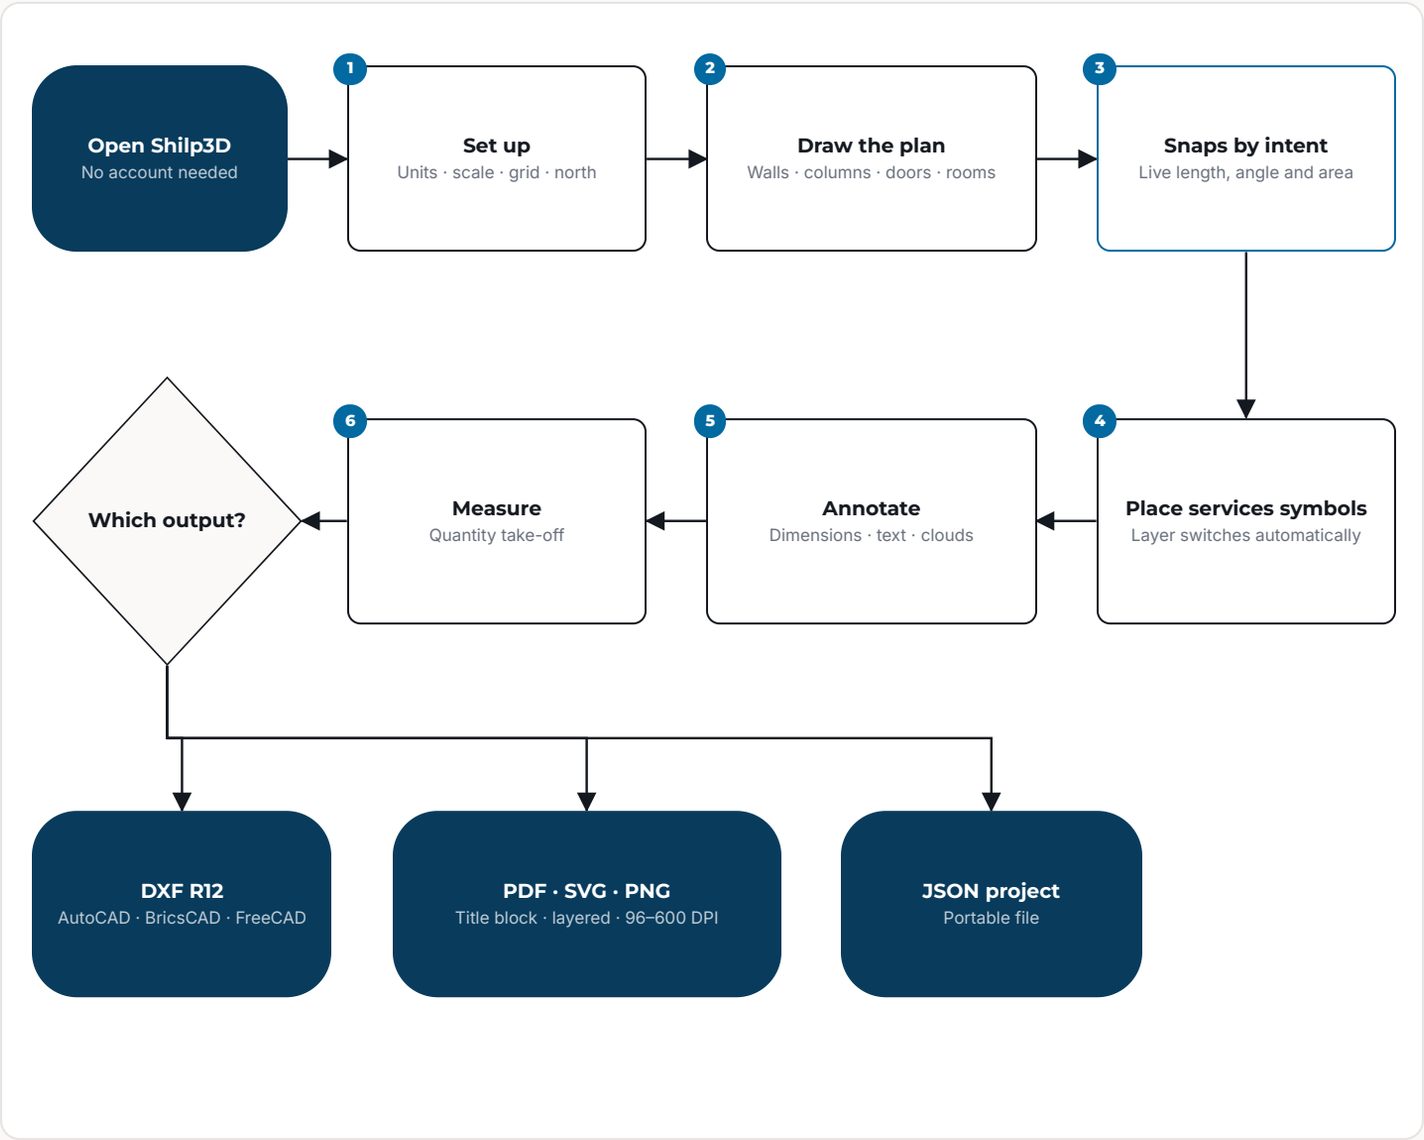

PRO

Sources · Shilp3D README (Output, Cloud, Also); prabhassaas.in/app/shilp3d and app registry.

FUNCTIONAL FLOWCHART

From a blank sheet to an exported drawing

No sign-in, no install. Everything before the export happens on your own device.

App does it · A person does it · AI proposes, a person decides · Decision · Start / finish

Numbered steps match the capability pages of this section.

Local first
Your work autosaves in the browser. Close the tab and it is waiting.

Undo is deep
Undo and redo with gesture merging, and a clickable version-history timeline.

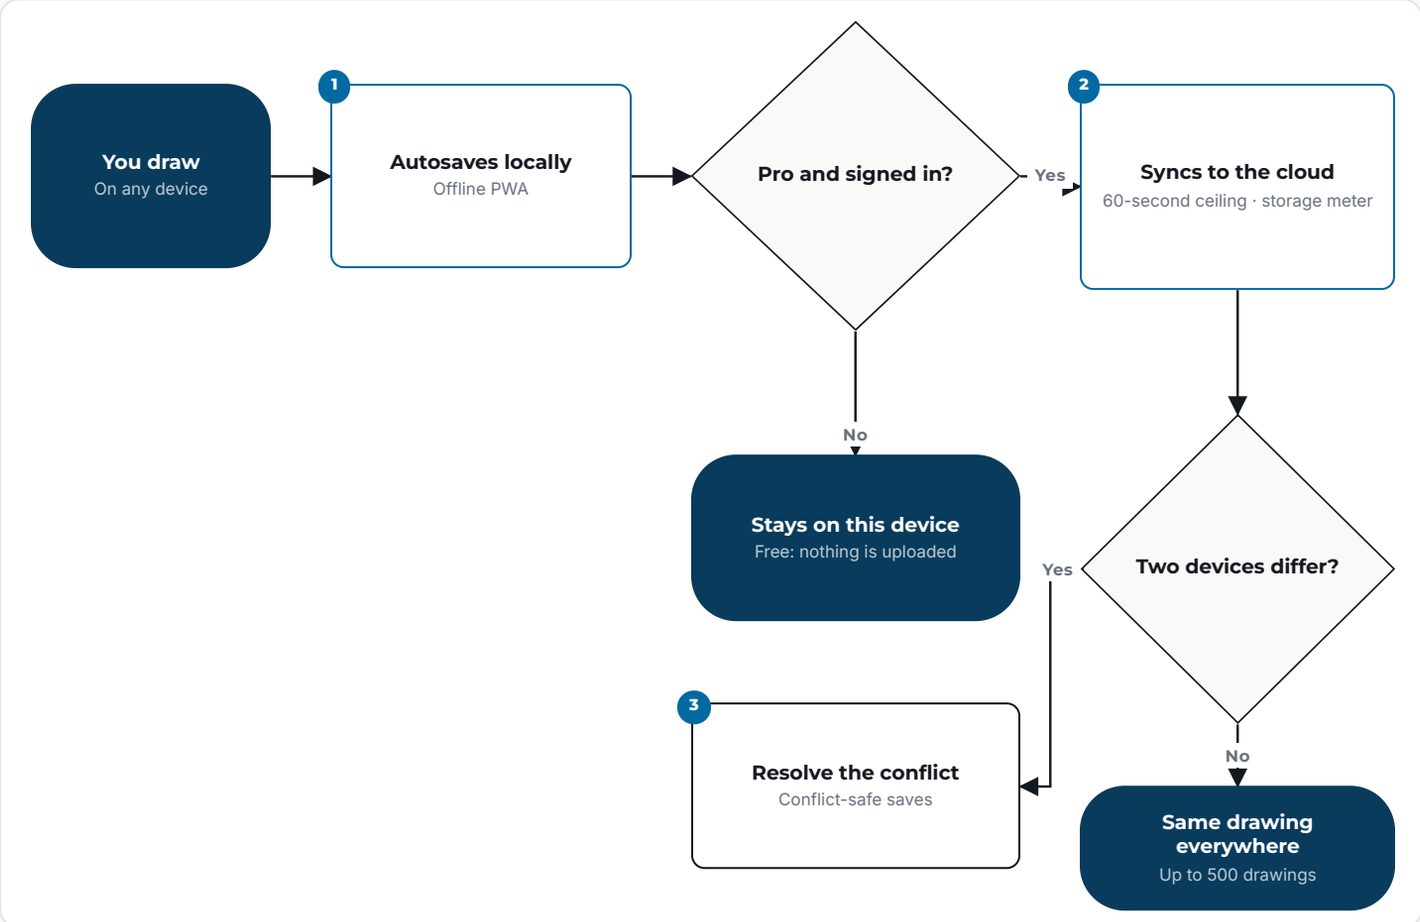

Details are printed as entered
Any practice details on a sheet are not verified. Drawings must be checked and signed by a licensed professional before statutory submission.

Sources · Shilp3D USER_GUIDE and README (Features, Output).

FUNCTIONAL FLOWCHART

Keeping drawings across devices

Local work needs nothing. Cloud sync is the one thing Pro adds, and it needs a connection when it syncs.

App does it · A person does it · AI proposes, a person decides · Decision · Start / finish

Numbered steps match the capability pages of this section.

Exports are never restricted

Free or Pro, DXF, PDF, SVG and PNG exports are available.

Cloud is opt-in

Signing in uses your Prabhas SaaS account, the same one as Lekhya and Seedha Bill.

Free cloud-tracked drawings

Free includes up to 2 saved cloud-tracked drawings before upgrade.

Sources · Shilp3D README (Cloud); prabhassaas.in/app/shilp3d (pricing and FAQ).

IN DAILY USE

Shilp3D for accountants, freelancers and CAs

Shilp3D is for people who draw plans. It is honest about who it is not for.

Freelancers

●●●○ Works well

For freelance engineers, architects and draughtspeople: the README names the contractor, the draughtsman and the approvals office. It is not a billing tool: pair it with Seedha Bill to invoice your work.

1. **Open and draw**
   No sign-in, no install. Set units and scale, then draw.
2. **Hand off a usable file**
   Export DXF for AutoCAD users, PDF with a title block for approvals, SVG or PNG for presentations.
3. **Invoice separately**
   Raise the invoice for your work in Seedha Bill.

Accountants

○○○○ Not designed for

Shilp3D draws plans. It has no accounting, tax or GST features.

1. **Use Lekhya for books**
   See the Lekhya catalogue.
2. **Keep it for a client**
   If a client is a builder or architect, Shilp3D is the tool they may use. It does not feed your books.

Chartered Accountants

○○○○ Not designed for

No CA practice features. A client in construction may use Shilp3D for plans; nothing in it connects to audit or compliance.

1. **Use Lekhya Pramaan for the practice**
   UDIN, audit forms and compliance live there.
2. **Treat plans as client documents**
   Exports are standard files (DXF, PDF, SVG, PNG).

Sources · Shilp3D README and published app page; prabhassaas.in app registry.

PLANS & GETTING STARTED

Start free. Pay for the cloud.

The drafting engine and professional exports are available from the start. Pro is for work that follows you across devices.

Free

₹0 start without paying

Precision 2D drafting and snapping · floor plan, structural and MEP tools · DXF, PDF, SVG and PNG export · offline PWA and local autosave · up to **2** saved cloud-tracked drawings before upgrade

Pro MOST CHOSEN

₹299 /month · ₹2,999/year + 18% GST

Everything in Free · up to **500** drawings · cloud backup and cross-device sync · version history and storage meter · conflict-safe saves when two devices differ

Also on the pricing page

- 14-day Pro trial.
- Reads are never blocked and exports are never restricted.

Free and Pro side by side

	FREE	PRO
Price (before GST)	₹0	₹299/month or ₹2,999/year
Precision 2D drafting, floor plan, structural and MEP tools	Yes	Yes
DXF, PDF, SVG and PNG export	Yes	Yes
Offline PWA and local autosave	Yes	Yes
Saved cloud-tracked drawings	Up to 2	Up to 500
Cloud backup and cross-device sync	—	Yes
Version history and storage meter	—	Yes
Conflict-safe saves when two devices differ	—	Yes
Trial	—	14-day Pro trial

— means not listed for that plan on the app page.

Getting started

1. **Open Shilp3D**
   Go to shilp3d.prabhassaas.in. It runs in your browser and can be installed as an app.
2. **Set units and scale**
   Open Settings: choose units, scale, grid and north angle.
3. **Draw and export**
   Draw the plan, add symbols and dimensions, then export DXF, PDF, SVG or PNG.
4. **Add Pro if you want the cloud**
   Sign in with your Prabhas SaaS account to sync drawings across devices.

Price basis, stated plainly

- Prices on the app page **exclude GST**. 18% GST is added at checkout.
- **14-day Pro trial** to try the cloud features.
- Free stays free: local drafting and every export.
- Pro cloud sync needs a connection when it syncs.

Source · prabhassaas.in/app/shilp3d (Pricing and FAQ) and the app registry, read 22 Oct 2026. Prices change: the pricing page is the current record.

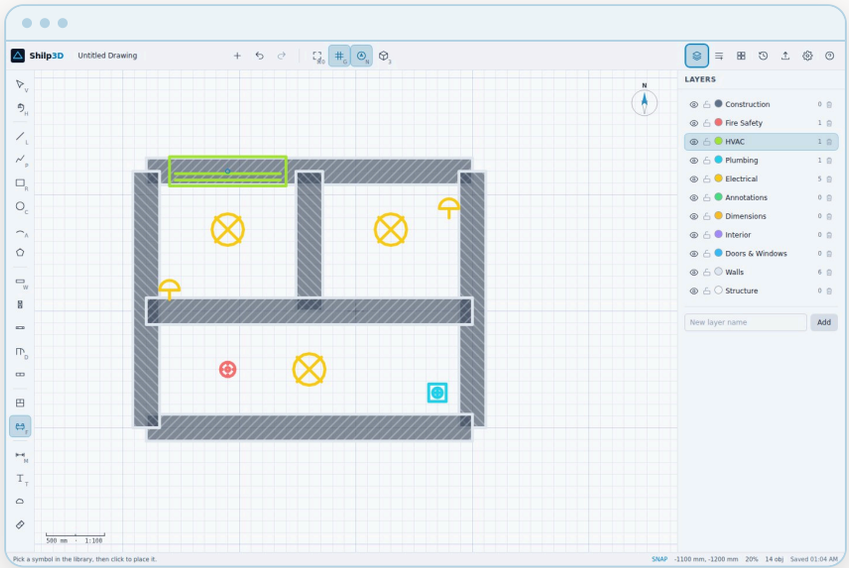

IN THE APP

Precision 2D drafting in your browser.

About these screens · A sample drawing. Screens are shown as supplied to the BrandKit; the product changes, so the app itself is the record.

WHAT'S NEXT

Shilp3D: improvements anticipated

Only items that are written down in the product's own documents. None is dated.

NEEDS OWNER DECISION

AI floor-plan assistant

Describe a plan in words and get editable geometry. Needs a cost model and a per-user quota first, so one user cannot spend the shared key.

Source: Shilp3D docs/ROADMAP.md, Phase 13

AWAITING DECISIONS

Auto-invoicing for subscribers

A server-built invoice PDF emailed after a successful payment, built as platform wiring so the next app is a switch, not a project.

Source: Shilp3D docs/ROADMAP.md, Phase 16

BUILT, AWAITING KEYS

Payments switched on

The payment code is written and tested; it needs the payment-gateway keys and the webhook registered.

Source: Shilp3D docs/ROADMAP.md, Phase 17

PLANNED

Email + OTP sign-in for non-Google users

A real sign-up with rate limiting, OTP expiry and mail authentication; belongs on the shared platform, not inside one app.

Source: Shilp3D docs/ROADMAP.md, Phase 12.3

PLANNED

Account page on its own domain

Move the account view to accounts.prabhassaas.in as the one place every app's access is shown.

Source: Shilp3D docs/ROADMAP.md, Phase 15

Shilp3D: reading this page

Shilp3D keeps a written backlog; the ordering above is not a delivery schedule.

What the labels mean

- **Proposed / Planned / Planning**: written down; not built; no date.
- **Needs owner decision / Awaiting decisions**: blocked on a choice that is not ours to make alone.
- **Built, awaiting keys**: the code exists; it is not live until the provider credentials are in place.
- **Deferred / Not being built**: considered and set aside on purpose.

What this page is not

A promise, a delivery schedule or a feature you can buy today. Items come from each product's own repository documents; where none exist, the page says so rather than inventing a roadmap.

TRUTH SHEET

What is confirmed, what depends, what is not included

Shilp3D is a focused 2D tool. This page says what it is, and what it is not.

Confirmed in the product

- Millimetre storage, ISO 128 line weights, intent-based snapping
- Walls, columns, beams, doors, windows, rooms with areas, 77 plan symbols, MEP symbols
- DXF R12, PDF with title block, layered SVG, PNG to 600 DPI, JSON projects
- Offline PWA with local autosave
- Pro cloud sync with conflict handling and version history

Needs something else to work

- Pro cloud features need a connection when syncing
- A Prabhas SaaS account for Pro
- The Naksha module is live; Sajja (interior) is planned and Yantra (automobile) is in discussion

Not included

- BIM, structural analysis or live model coordination: use a dedicated tool and hand off by DXF, PDF or SVG
- Accounting, billing or GST features
- Statutory certification: details printed on a sheet are not verified

Verify before you rely on it

- Drawings must be checked and signed by a licensed professional before statutory submission
- That your recipient's CAD tool opens the DXF R12 export the way you expect: try a sample first
- The current Free and Pro limits on the pricing page: they can change

Questions worth asking us before you buy

- Do I need cloud sync, or is local drafting enough?
- Which export will my contractor or approvals office accept?
- Do I need more than 500 drawings?

Scores, readiness notes and AI features are decision aids, not guarantees. This catalogue describes Shilp3D as published on 22 Oct 2026.

COMING NEXT

Prabhas Desk

An AI-native office suite for India: eleven apps and one assistant.

Pen
Documents with track-changes on by default and “Bhej Do” one-line mail-merge to email, message or PDF.

Grid
Sheets with “Pooch-Taach” natural-language pivots and lookups, plus bank-statement OCR import.

Base
A no-code relational database: linked tables, form designer, queries and reports.

Show
Slides with master-driven themes, a rehearsal coach and deck-to-narrated-video.

Locker
Secure cloud storage for every Prabhas file, with bulk migration from other cloud drives.

Jot
Quick notes and parchi that sync everywhere.

Forms
Forms, surveys and checklists that collect responses straight into Grid.

Adda
Team chat inside the workspace, next to the work.

Diary
A calendar that is festival- and muhurat-aware and native to the April to March financial year.

Call
Video meetings inside the suite, with no separate app or login.

Mail
An inbox connected to the whole desk, with assistant triage and drafting.

Vyasa 1.0
The assistant layer across all of it: a Ctrl+K intent bar, Indic voice input and skill cards that teach the manual method after doing the task.

What would make it different (stated intent)

- **AI-native files:** intelligence inside the document, sheet and slide, not bolted on.
- **Voice-first Indic:** designed for Indian languages and voice input.
- **Offline-first and portable:** open file formats (.pen, .grid, .show) on a CRDT engine, so work merges and keeps working without a connection.
- **Kaam Modes:** pick a job such as an invoice, resume or tender reply and the toolbar reshapes around it.

Planned rollout order

1. **Editors first:** Pen, Grid and Show with the intent bar and shared engine.
2. **Workspace:** Locker, Jot, Forms and Adda.
3. **Time and meetings:** Diary and Call.
4. **Mail** last, tying everything together.

Framework-first and phased, per the published Desk page.

Honest status

Desk is at the **planning and validation stage**. Everything on this page describes the intended product, not a shipped one, and the website invites early design partners to shape what is built first. It has no price, no release date and no trial.
