01 COMPANY

One account. Many apps. Built for Indian business.

Prabhas SaaS is a growing, modular ecosystem of business software. Start with the app you need today (billing, accounting, productivity) under a single Prabhas login. Buy by need, never forced bundles.

Each app does one job well and shares the same login, support and billing underneath, so adding the next one is effortless. Every app works standalone; customers subscribe to the next one only when it earns its place in their workflow.

AT A GLANCE

THE RULE BEHIND EVERYTHING WE BUILD

“Move with the business, never ahead of the wallet.”

Apps stay simple and standalone, you pay only when you get value, and you add the next tool when your business actually needs it. Software that stays out of the way, so business can get on with business, the seedha-saadha way.

OUR CORE VALUE

FOCUS

F**Finely****O****Orchestrated****C****Cohesive****U****Unwavering****S****Service**

Finely Orchestrated Cohesive Unwavering Service: the standard held for every app, every fix and every reply.

VISION

Empowering Indian businesses with intelligent automation and a seamless, modular SaaS ecosystem: one login, every app.

01 PHILOSOPHY

Honest, modular software. Built the seedha-saadha way.

Product philosophy

Modular apps

Each app does one job well and works standalone. Add the next one only when it earns its place.

One identity

A single Prabhas login links every app, so your data always knows it is yours.

Shared, secure backend

One database with row-level security and audited access. No app sees another tenant's data.

Seedha-saadha

Simple and straight. Plain language, no accountant-speak, no clutter.

Value before payment

Free trials and free tools, so customers see the value before they pay.

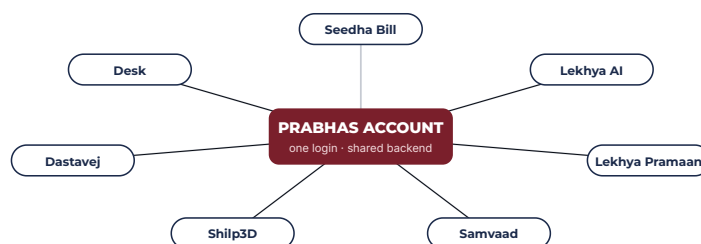

India-first, GST-correct

Built for Indian rules to the rupee: correct tax, rupee pricing, UPI and cards, made in India.

THE HUB-AND-SPOKE PLATFORM

Every app shares one login, one secure backend and one account. The hub is built once; each app is a spoke that plugs in.

Engineering principles, applied across the suite

AI proposes, a human approves

In Lekhya and Samvaad, AI output lands in a review queue. Nothing posts to the books by itself.

Double-entry, immutable

Lekhya rejects any unbalanced journal. Posted entries are corrected only by reversing entries.

Money in paise

Amounts are entered in rupees, shown with Indian grouping (₹1,29,900) and stored as integer paise.

GSTIN checked properly

GSTINs are validated by format and official check digit before any lookup is made.

Private by design

Dastavej processes files entirely in the browser; Shilp3D keeps free drawings on the user's device.

One form standard

Every sign-in and form across the suite follows one written standard: show/hide password, Caps Lock warning, inline errors.

02 SAAS ECOSYSTEM

One account at the centre. Every app a spoke.

Parent company, product categories, each product with its main modules, and the platform, AI and integrations they share.

02 THE CONNECTION IS THE ADVANTAGE

From a message or an invoice to the books

Seedha Bill, Samvaad and Lekhya are separate products that work as one pipeline. A sale is captured once and ends as a balanced journal entry, with a human approval on the way.

Verified integrations

Only integrations implemented or documented in the product code are listed

INTEGRATION	WHAT IT DOES	USED BY
Razorpay	Payments by UPI, cards and netbanking; payment verification grants the plan; captures post as receipts in Lekhya	Seedha Bill, Lekhya, platform
Seedha Bill ↔ Lekhya	One-click posting of finalised invoices, inventory sync as item masters, deduplicated and locked once posted	Seedha Bill, Lekhya
GST gateway (GSP)	GSTIN validation, e-invoice (IRN) and returns through one interface; a mock mode for testing	Lekhya
GSTIN verification	Format and check-digit validation first; verified lookups cached so the same GSTIN is never paid for twice	All apps (shared service)
WhatsApp Cloud API	Invoice-ready notifications to the customer, switched on by configuration	Lekhya
Google sign-in	Continue with Google on the shared Prabhas account	Account, Seedha Bill, Lekhya
AI providers	Groq (default), Anthropic and local Ollama drivers; user-supplied providers in Dastavej	Lekhya, Samvaad, Dastavej
Tally · DXF · bank files	Tally XML import; DXF R12 export and import; bulk payment files in 8 bank formats	Lekhya, Shilp3D
Cashfree	Payment integration built and awaiting keys	Shilp3D

What every product shares

One Prabhas account

The same sign-in across every app that needs one; Dastavej needs none.

Built for India

Rupee amounts, GST rules, Indian bank formats and Indic-language support where relevant.

People stay in control

AI suggestions wait for approval; nothing posts itself.

Standalone, yet connected

Each app works alone; connections such as Seedha Bill → Lekhya are opt-in.

04 BUSINESS SOLUTIONS

Who we serve, and what changes for them

Customer groups below are the ones each product is designed and documented for.

Outcomes are qualitative; no percentages are claimed.

Freelancers & consultants

Designers, developers, service providers

Need a correct GST invoice in minutes, without an accountant or a spreadsheet.

- ✓ Tax split and numbering right every time
- ✓ Clients saved with an ID for next time
- ✓ Clean, watermark-free PDF to send

Seedha Bill · p.11

Dastavej · p.28

Small businesses & traders

Shops, distributors, multi-branch firms

Bill from every branch, keep stock and get sales into the books without re-typing.

- ✓ Branch-wise GSTIN and invoice series
- ✓ Stock register with barcodes
- ✓ A sale recorded by typing one message

Seedha Bill · p.11

Samvaad · p.21

Lekhya AI · p.14

Growing companies & accountants

Businesses doing their own accounts

Proper double-entry books, bank reconciliation and GST returns from one ledger.

- ✓ Invoices post themselves after approval
- ✓ Bills read by AI, checked by people
- ✓ Returns prepared from the books

Lekhya AI · p.14

Seedha Bill · p.11

Chartered Accountants

CA firms and tax professionals

Run many client companies, attestations and deadlines from one place.

- ✓ UDIN and DSC registers in one view
- ✓ Audit reports tracked to filing
- ✓ Deadlines per client in one calendar

Lekhya Pramaan · p.19

Lekhya AI · p.14

Civil engineers & architects

Draughtsmen, contractors, interior designers

Draw to scale, share CAD-compatible files and know what to buy.

- ✓ Quantities read off the drawing
- ✓ DXF, PDF and SVG that measure true
- ✓ Works offline on site

Shilp3D · p.24

Offices, schools & clinics

Anyone handling forms and PDFs

Edit, sign and collect forms without uploading sensitive documents.

- ✓ Files never leave the device
- ✓ Form responses straight into Excel
- ✓ Geometry constructions for teaching (Shilp3D)

Dastavej · p.28

Shilp3D · p.24

05 AI ECOSYSTEM

AI proposes. A person decides.

AI is used where it removes typing (reading bills, understanding a sentence, answering from a document) and kept away from decisions that must be exact.

The pattern: purchase-bill extraction in Lekhya

INPUT	AI PROCESSING	VALIDATION	OUTPUT	BUSINESS ACTION
PDF or photo of a bill	Vision model reads seller, buyer, GSTIN, dates, line items, tax and totals	Extraction validator, vendor resolver (GSTIN, then name), duplicate / branch check	A pending suggestion with confidence	Accountant approves; entry posts

PRODUCT	AI CAPABILITY	WHERE THE MODEL RUNS	STATUS
Lekhya AI	Invoice OCR and extraction · in-app assistant · natural-language queries · account suggestion	Server-side: Groq by default; Anthropic or local Ollama selectable	● LIVE
Samvaad	Five-layer message parser · bill scanner with duplicate guard	Supabase edge function only; never in the app	● IN DEVELOPMENT
Dastavej	Chat with your PDF (RAG) · document generation · form fill · OCR clean-up	User's own local model or API key; nothing sent to Prabhas	● LIVE
Shilp3D	AI floor-plan assistant	Awaiting decision	● PLANNED
Desk	Vyasa 1.0 intent bar and Indic voice input	Planned	● PLANNED

Cheapest layer first

Samvaad reads a message with grammar rules and the customer catalogue before any model call. Greetings and spam are discarded without spending AI credits.

Keys stay on the server

Provider keys live in server-side secrets, never in the mobile app or the browser. Changing model or prompt is a deploy, not an app release.

Metered and auditable

Lekhya records every AI call per tenant against a monthly credit allowance, with a usage history customers can see.

NEVER DELEGATED TO A MODEL

Tax arithmetic

CGST/SGST/IGST is computed by rules from the states, never by the model.

Posting to the ledger

Only a person approving a queued suggestion creates a journal.

Guessing a required field

Samvaad asks the user instead of filling a gap by guesswork.

Holding provider keys

Keys stay in server secrets or with the user (Dastavej).

GST INVOICING

Seedha Bill

● LIVE

Open app ↗

SCAN TO OPEN

GST invoices, seedha-saadha.

Seedha Bill is the simplest way for Indian freelancers and small businesses to create GST-ready invoices. The client's state decides CGST + SGST or IGST, service codes are suggested for the trade, and every client is saved for next time. When the business outgrows it, invoices and stock carry straight into Lekhya's books.

Seedha Bill product page

THE PROBLEM

Freelancers and small businesses bill from spreadsheets and templates, and get the tax split, numbering and HSN/SAC codes wrong.

WHAT CHANGES

- ✓ Bill in minutes instead of spreadsheets
- ✓ Tax split and numbering correct by construction
- ✓ One client master across every invoice
- ✓ A clean path into full accounting

SEEDHA BILL · KEY FEATURES

Built for the way freelancers actually bill

No bloated accounting suite. Just the invoicing tools a business reaches for every week, done properly.

**Correct GST, always**

CGST + SGST for same-state, IGST for inter-state, calculated from the client's state. No manual maths.

**HSN / SAC suggestions**

Codes suggested from the business's line of work, so the right classification is one tap away.

**Client master list**

Every client is saved with a Client ID. Search by name, ID or GSTIN and the details fill in.

**Tax Invoice & Bill of Supply**

Switch document type per invoice. Auto-numbering keeps the series clean.

**More than one branch**

Each branch keeps its own address, GSTIN where separately registered, invoice series and staff. The branch's state decides the tax.

**Inventory & barcodes**

A stock register with size, weight, location and printable barcodes, low-stock filters and CSV export.

**Cancel with a credit note**

Cancelling an issued invoice records a credit note; the original is kept for the record.

**GSTR-1 export**

Invoice-wise CSV in the shape a CA needs for GSTR-1, plus a dashboard GST summary.

**Your logo, saved products**

Business logo on every invoice and saved products for faster billing on Pro and Max plans.

AI ACCOUNTING ERP

Lekhya AI

● LIVE

Open app ↗

SCAN TO OPEN

One-click accounting for India.

Lekhya is a multi-tenant, GST-compliant double-entry accounting ERP for Indian businesses and CA firms. Invoices from Seedha Bill post into the books in one click; purchase bills are read by AI and queued for approval; GST returns are prepared from the ledger itself. Lekhya means 'writing' in Sanskrit: keeping your books.

CATEGORY	STATUS	BUILT FOR	WEB
AI accounting ERP	Live	Businesses doing their own accounts, Accountants, CA firms (Pramaan edition)	lekhya.prabhassaas.in

The screenshot shows the Lekhya dashboard for the date 09 Jul 2026. The left sidebar contains navigation links for Dashboard, Accounting (Sales Invoices, Purchase Invoices, Journal Vouchers, Chart of Accounts), Reports (Profit & Loss, Balance Sheet, Trial Balance, AR / AP Aging), GST (GST Dashboard, GSTR-1, GSTR-3B, GSTR-2B Recon), and other settings. The main dashboard area displays four summary cards: Sales This Month (₹118,590, GST-inclusive), Purchases This Month (₹0), Outstanding AR (₹437,210), and Outstanding AP (₹0). Below these are two sections: Recent Invoices (listing five invoices with details like INV-2026-0001, Karnataka Weaves Retail, dated 06 Jul, for ₹53,100) and Quick Actions (New Invoice, New Journal, GSTR-1, Bank Recon, AI Extract, Tally Import).

Lekhya dashboard

THE PROBLEM

Small businesses re-key invoices into accounting software, reconcile banks by hand and assemble GST returns from scattered data.

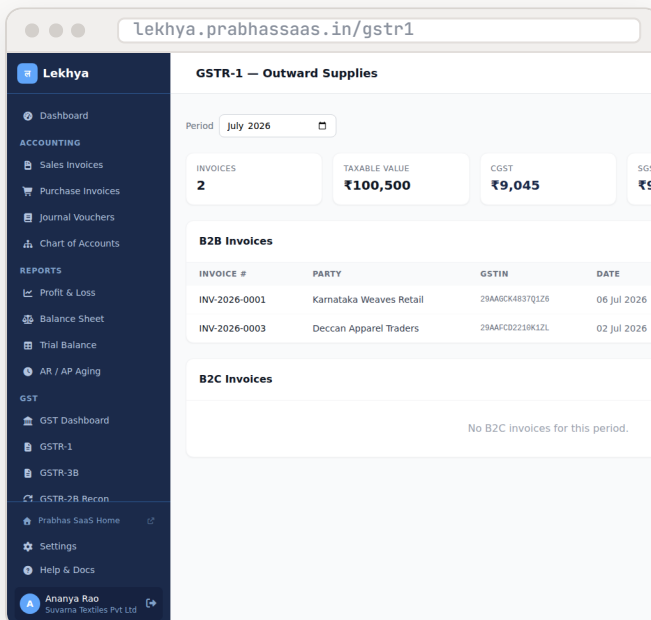

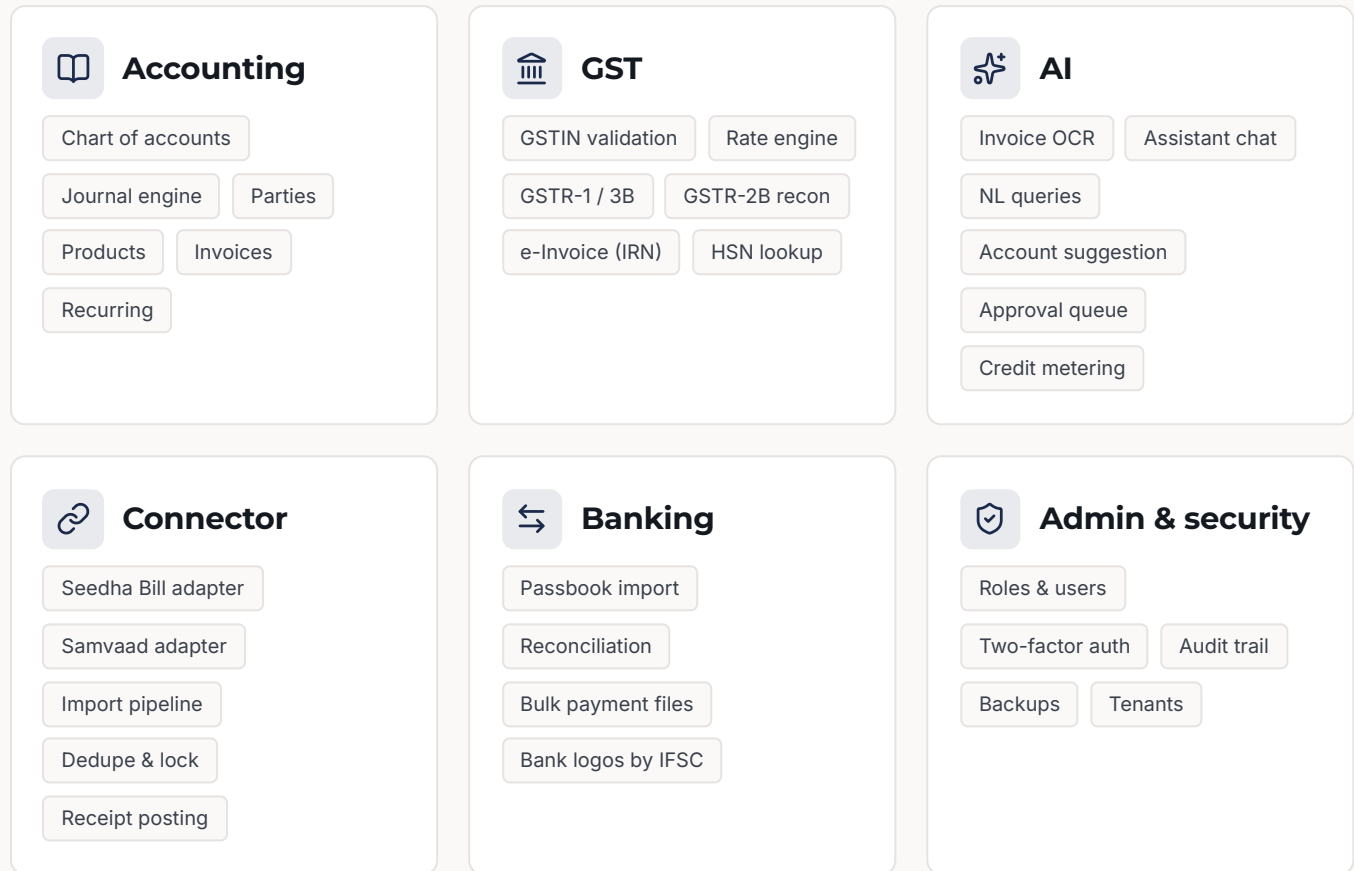

WHAT CHANGES

- ✓ No re-keying of invoices
- ✓ AI reads bills; people stay in control
- ✓ GST returns straight from the ledger
- ✓ A clean migration path from Tally

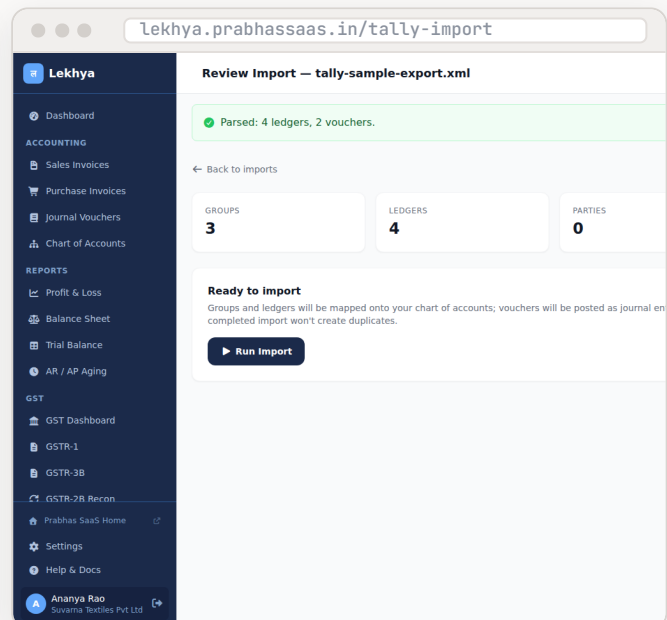

LEKHYA · MODULE MAP

A modular monolith: six modules, one ledger

GSTR-1 preparation

Tally migration preview

Reports, generated from the live ledger

Profit & Loss Balance Sheet Trial Balance Day Book AR Aging AP Aging Sales Register

Purchase Register Party Statement GST Summary PDF export Email a report

LEKHYA · KEY FEATURES

Double-entry done right, GST from the ledger

**Double-entry journal engine**

Every posting is validated debit = credit before it is written. Posted journals are immutable; corrections are reversing entries.

**Sales & purchase invoices**

Automatic CGST/SGST or IGST by state, PDF output, conversion, cancellation and recurring invoices.

**e-Invoice (IRN)**

IRN generation through the GST gateway interface, ready for a connected GSP.

**Bank reconciliation**

Import a passbook, match it against the ledger and complete the reconciliation.

**Tally migration**

Upload a Tally XML export: ledgers, parties and sales, purchase, receipt, payment, journal and contra vouchers import.

**Indian GST chart of accounts**

A standard Indian GST chart pre-loaded, with sub-accounts and opening balances.

**GST returns**

GSTR-1 generation, GSTR-3B summary and GSTR-2B import with purchase reconciliation.

**Live reports**

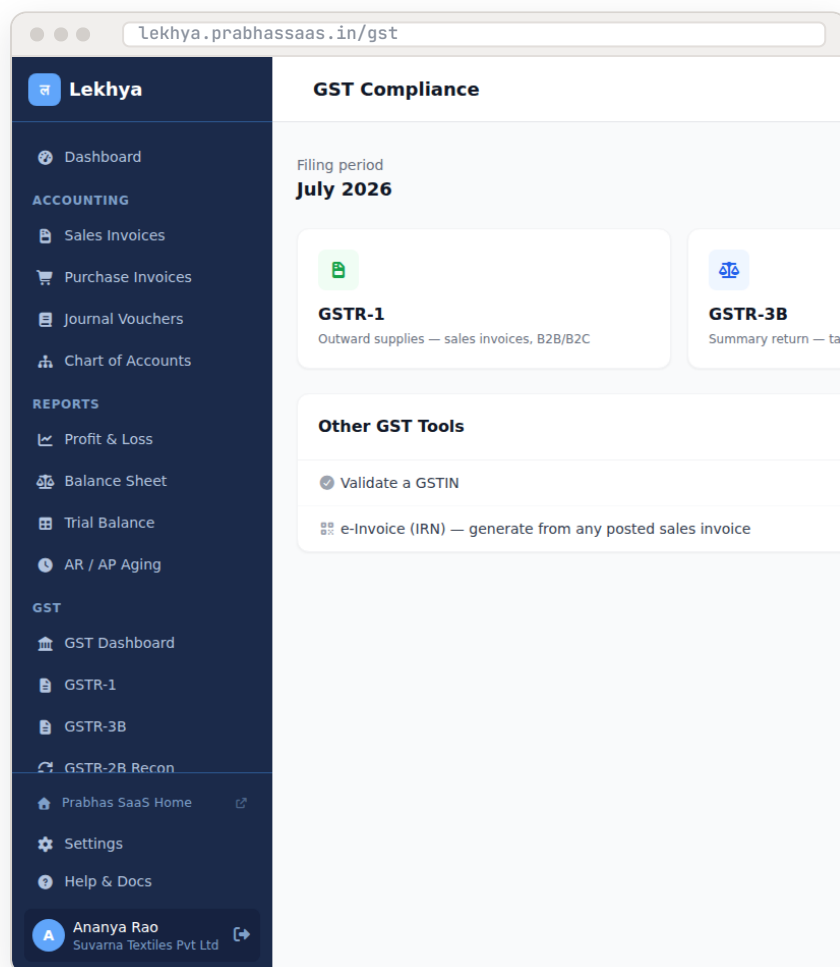

P&L, balance sheet, trial balance, day book, AR/AP aging, sales and purchase registers, party statements.

**Bulk payment files**

Vendor payment files in the upload formats of HDFC, ICICI, SBI, Axis, Kotak, YES, PNB, Bank of Baroda, or universal NEFT/RTGS.

**Multi-company, multi-year**

Several companies and fiscal years under one login, with company switching.

GST dashboard

Architecture principles

- 1 Double-entry enforced before any write
- 2 AI proposes, human approves
- 3 GST only through a gateway interface
- 4 Connector is idempotent
- 5 Every query tenant-scoped

LEKHYA · AI CAPABILITIES

AI that reads the bill, and waits for a yes

Groq-hosted models (OpenAI-compatible) by default, with Anthropic and local Ollama drivers available; AI usage is metered per tenant in credits.

Invoice OCR & extraction

INPUT	AI PROCESSING	VALIDATION	OUTPUT	BUSINESS ACTION
PDF or photo of a bill	Vision model reads seller, buyer, GSTIN, dates, line items, tax and totals	Extraction validator, vendor resolver (GSTIN, then name), duplicate / branch check	A pending suggestion with confidence	Accountant approves; entry posts

In-app assistant

INPUT	AI PROCESSING	VALIDATION	OUTPUT	BUSINESS ACTION
A question typed in the module	Module-scoped chat, with invoices attachable in the chat	Scanned bills staged, never posted from chat	Plain-language answer or review link	User acts in the app

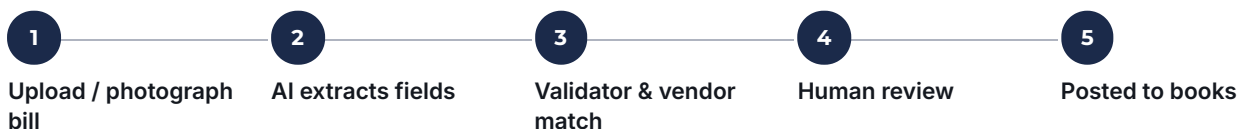

Natural-language queries

INPUT	AI PROCESSING	VALIDATION	OUTPUT	BUSINESS ACTION
A plain-English question about the books	Model interprets the question against ledger data	Read-only	Answer from live data	Faster decisions

Account suggestion

INPUT	AI PROCESSING	VALIDATION	OUTPUT	BUSINESS ACTION
An expense description	Model suggests an account head from the chart of accounts	User confirms	Suggested ledger	Consistent coding

Purchase bill by AI: the full path

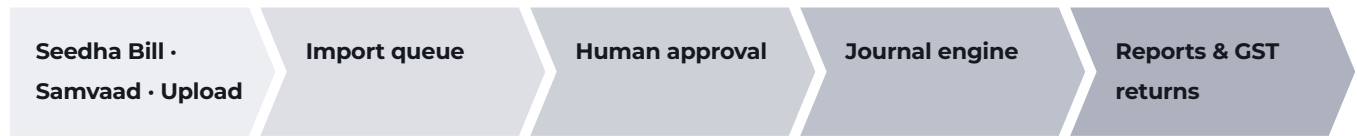

If the vendor already exists under a different GSTIN, Lekhya asks whether the bill is from a branch, a separate party or the existing one, instead of guessing.

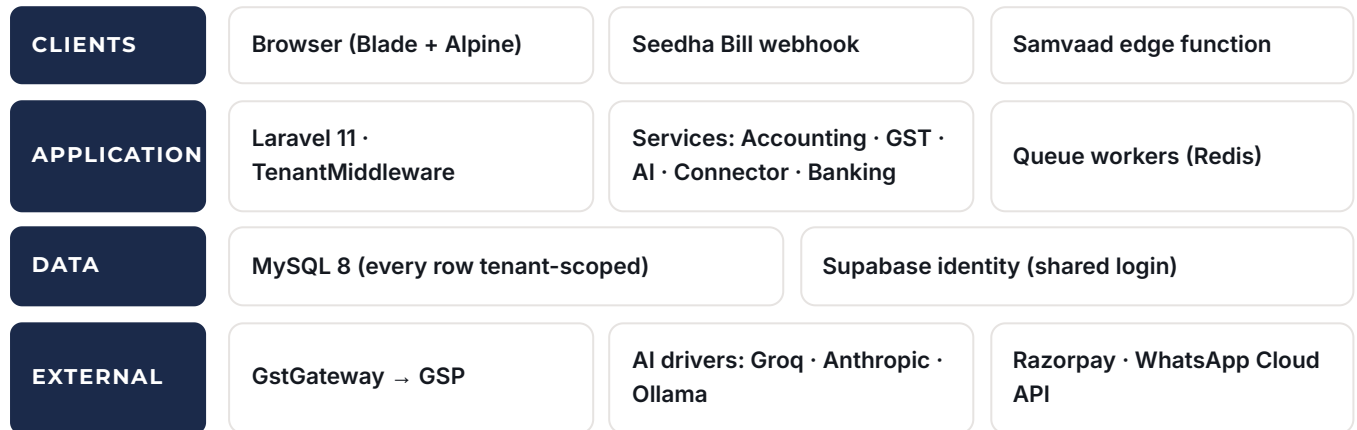

LEKHYA · ARCHITECTURE

Business view and technical view

Business architecture

Technical architecture

Security

- ✓ Tenant isolation on every query
- ✓ Role-based access (Spatie)
- ✓ Two-factor authentication (TOTP)
- ✓ Audit trail and audit log
- ✓ Database backups
- ✓ User invitations

CHAT-TO-BOOKS MOBILE APP

Samvaad

● IN DEVELOPMENT · ANDROID FIRST

Join early access ↗

SCAN TO OPEN

Send a message. Get an invoice.

Samvaad is the chat app for your books. Type the bill the way you would tell a person and Seedha Bill raises the invoice; photograph a purchase bill and AI reads it and files it into Lekhya for approval. It is not a messenger: there is no person-to-person chat. Messaging is simply the input method.

CATEGORY

Chat-to-books mobile app

STATUS

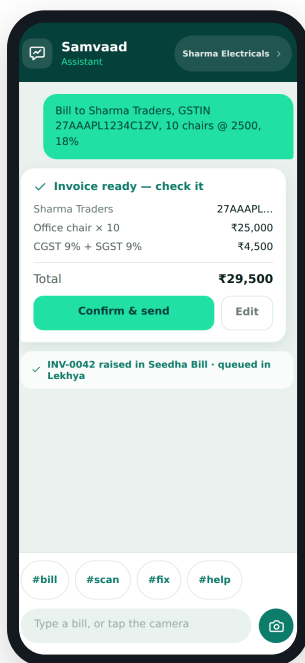

In development · Android first

BUILT FOR

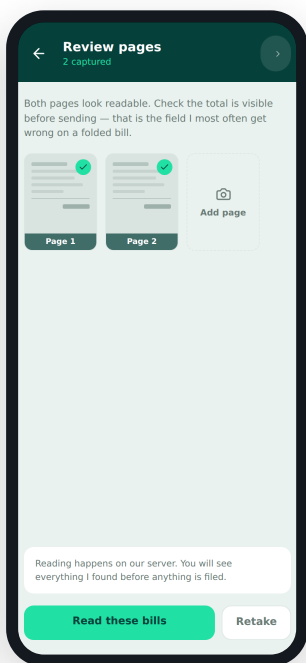

Shopkeepers and traders, Seedha Bill customers, Lekhya customers

WEB

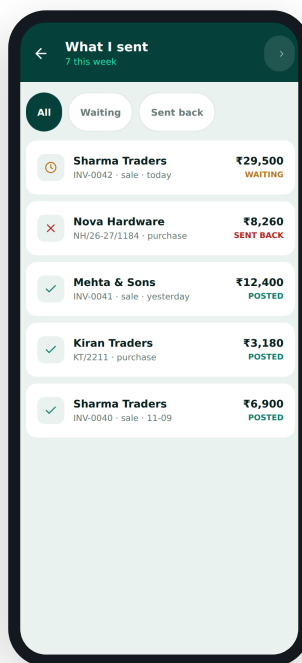

lekhya.prabhassaas.in/samvaad

#bill → invoice card

Scanner review

What I sent (queue)

Two things. That is the whole app.

Sales go out by typing.
Purchases come in by camera.

Not a messenger

There is no person-to-person chat. Messaging is the input method.

Free with Lekhya or Seedha Bill

For anyone already on either product.

Product design screens from the Samvaad design set.

THE PROBLEM

A shopkeeper knows exactly what was sold and to whom, but recording it means opening a form with eleven fields.

WHAT CHANGES

- ✓ Record a sale in one sentence
- ✓ Purchase bills captured by camera
- ✓ Spam never costs an AI call
- ✓ Two approvals before anything reaches the ledger

SAMVAAD · KEY FEATURES

Four commands, one careful pipeline

#bill: sales by typing

Customer, GSTIN, items and rate read from one message; CGST/SGST or IGST worked out; a finished invoice returned to confirm.

#scan: purchases by camera

Vendor, GSTIN, date, line items and total read from a photographed bill, with a duplicate guard.

#fix: corrections

Corrections work like a reversing entry. A message that became an entry cannot be edited or deleted.

Entitlement routing

Seedha Bill alone, Lekhya alone or both: the server routes each message; one company never runs two invoice series.

Approval queue

The queue is a gate, not a log. Nothing posts itself.

Offline outbox

Messages queue locally and send when the connection returns.

Routing by subscription

SUBSCRIBER	#BILL: SALES	#SCAN: PURCHASE
Seedha Bill only	Seedha Bill raises the invoice. One human gate.	Not in v1; the card offers Lekhya.
Lekhya only	Lekhya raises the invoice and queues it to the journal. Two gates.	Full flow → queue → journal. Two gates.
Both	Seedha Bill raises the document; Lekhya gets the queue row. Two gates.	Full flow → Lekhya. Two gates.

Seedha Bill owns the invoice number series whenever it is in the picture. One company never runs two series.

Sales: just type it

Purchases: photograph it

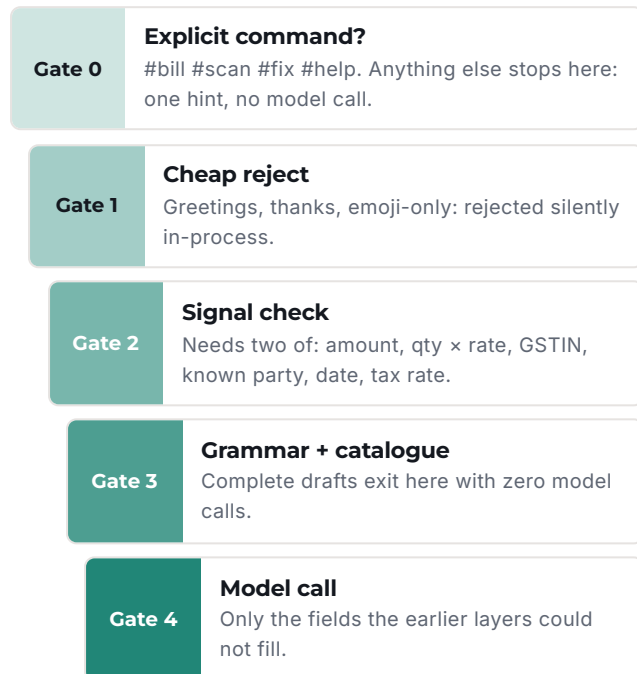

SAMVAAD · AI LAYER

AI like a postman: read only what is relevant

AI runs only inside the Supabase edge function, never in the app; keys never ship in the APK. Non-command messages are discarded before any model call.

Gates, cheapest first

Five-layer parser, cheapest first

INPUT A #bill message

PROCESSING L1 grammar (regex, arithmetic) → L2 catalogue match → L3 model only for missing fields

VALIDATION L4 asks the human for anything required; L5 tax is deterministic, never the model's

OUTPUT A draft invoice with confidence

ACTION User confirms; routed to Seedha Bill / Lekhya

Bill scanner

INPUT Photographed purchase bill

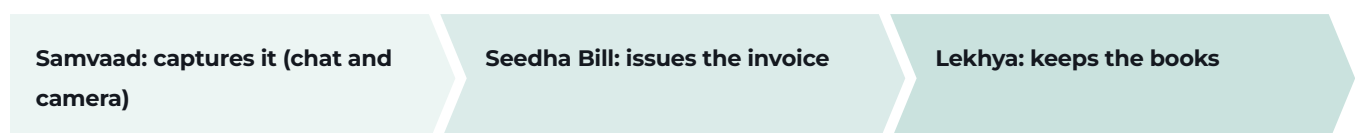

PROCESSING Server-side vision extraction

VALIDATION Duplicate guard; low-confidence fields flagged

OUTPUT A purchase entry draft

ACTION Two human gates before a journal

BLUEPRINT DRAFTING

Shilp3D

● LIVE · NAKSHA MODULE

Open app ↗

SCAN TO OPEN

Naksha: precision drafting in the browser.

Shilp3D is a drafting platform; Naksha (नक्शा), its first module, is for civil planning and construction. Every coordinate is stored in millimetres, line weights follow ISO 128 pen grades and exports are dimensionally correct: a 3 m wall measures 3 m when the SVG opens in Illustrator. It runs offline in the browser, with cloud sync for Pro users.

CATEGORY

Blueprint drafting

STATUS

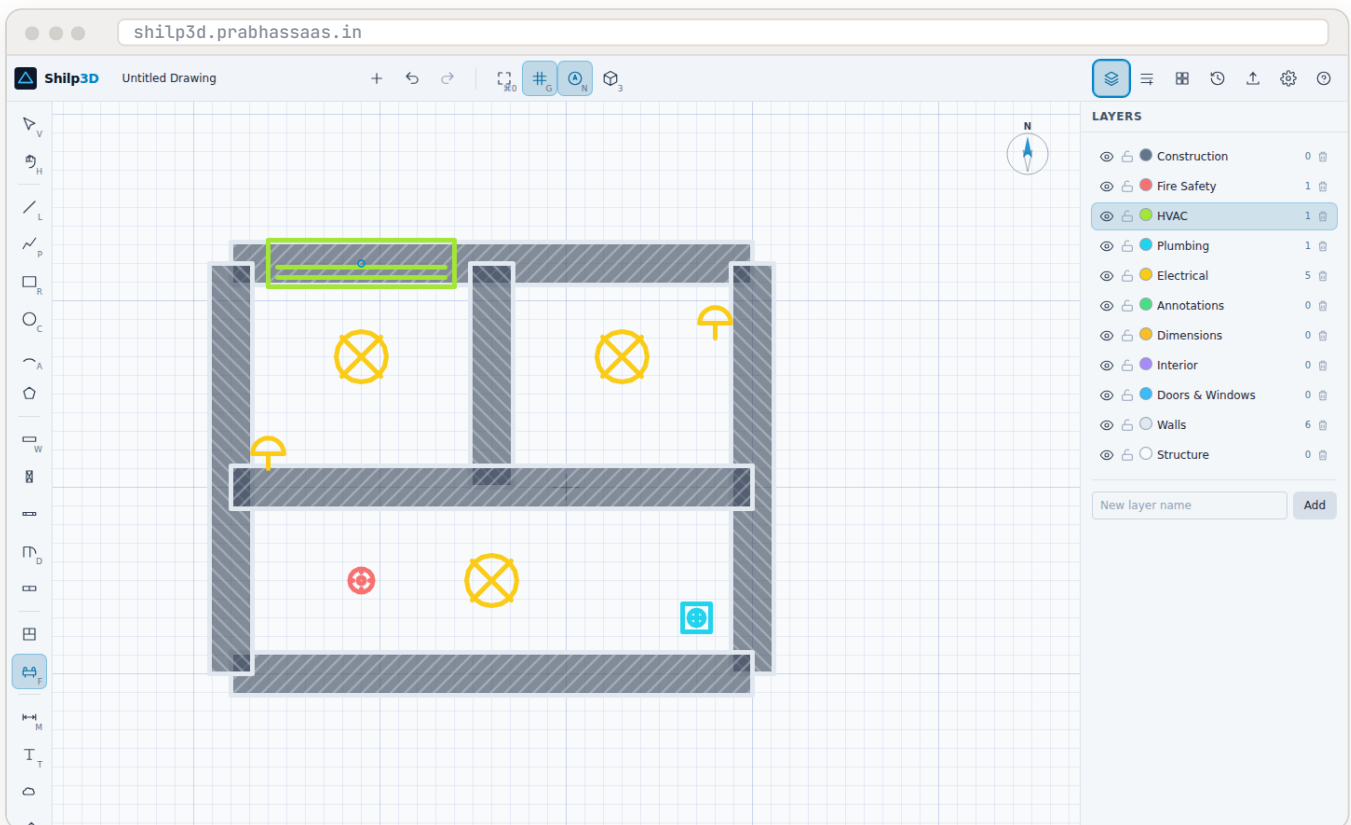

Live · Naksha module

BUILT FOR

Civil engineers, Architects
& draughtsmen,
Contractors

WEB

shilp3d.prabhassas.in

Naksha drafting canvas

THE PROBLEM

Engineers draw in one tool, then re-type quantities into Excel by hand, and the spreadsheet drifts from the plan.

WHAT CHANGES

- ✓ Quantities that follow the drawing
- ✓ CAD-compatible output without a CAD licence
- ✓ Works offline on site
- ✓ Free tier with full-quality export

SHILP3D · KEY FEATURES

A drafting tool, not a drawing app

**Precision snapping**

Endpoint, midpoint, centre, intersection, perpendicular, guide and grid snaps, with ortho lock and flexible unit entry.

**Walls, columns, beams**

Walls with poché hatching and auto-chaining, doors with swing arcs, windows and rooms with automatic area.

**MEP symbols**

Electrical, plumbing, HVAC and fire-safety symbols to IEC 60617 / IS 962 conventions, each on its own layer.

**77 interior symbols**

Scaled plan symbols for seating, tables, bedroom, kitchen, bathroom, storage and structure.

**Live measurements**

Length, angle, radius, perimeter and area update on the cursor before the line is committed.

**Combine shapes**

Merge, subtract, intersect and exclude closed shapes, with holes handled.

**Quantity take-off**

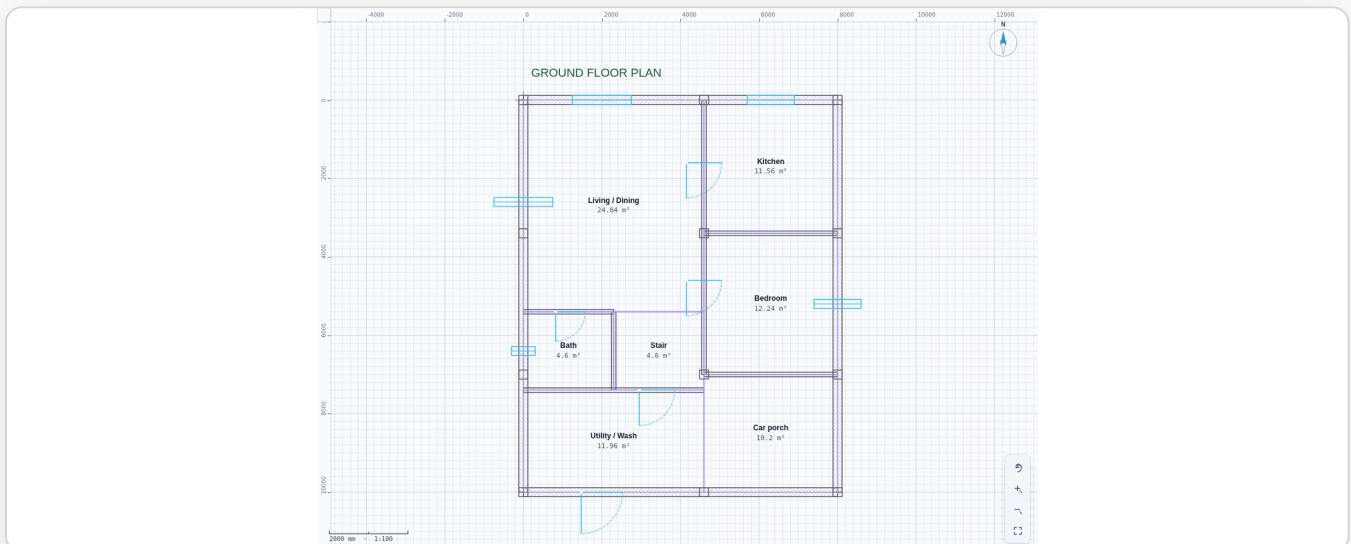

Brickwork, plaster, concrete and floor finish measured from the model; steel labelled as an estimate.

**3D preview**

Massing preview with section cut, materials and storeys.

**Geometry constructions**

Compass-and-straightedge constructions for school mathematics, with the method shown.

G+1 plan

Output, dimensionally correct

Every export at full quality, including on the free tier

SHILP3D · QUANTITY TAKE-OFF

What the drawing says you have to buy

Quantities are read straight off the geometry, so the purchase list changes when the plan changes. Anything estimated is labelled as such.

Quantity take-off beside the 3D model

Plan to purchase list

- 1 Draw the plan
- 2 Model in 3D
- 3 Read quantities
- 4 Export DXF / PDF

Worked example: whole building

G+1 tutorial drawing

Brickwork in walls	54.4 m³
Wall plaster, both faces	574 m²
Concrete in columns	3.33 m³
Concrete in slabs	17.0 m³
Floor finish	136 m²
Reinforcement steel	2,033 kg

Measured from the model

Brickwork (openings deducted), plaster, concrete in columns and slabs, floor finish, wall length: per floor and for the whole building.

Estimated, and labelled EST

Steel from concrete volume at a rate the engineer sets (100 kg/m³ here). Replace with the bar bending schedule before ordering.

SHILP3D · THE PLATFORM

Shilp (शिल्प, craft) is the platform. Each module is named for what it makes.

FREE PDF EDITOR

Dastavej

● LIVE · FREE

Open app ↗

SCAN TO OPEN

Edit any PDF without uploading it anywhere.

Dastavej merges, edits, annotates, converts, compresses and OCRs PDFs inside the browser. There is no backend, no database and no upload endpoint: the app is a static site, and every byte of every PDF stays on the user's device. No sign-up, no file-size limit, no watermark.

CATEGORY

Free PDF editor

STATUS

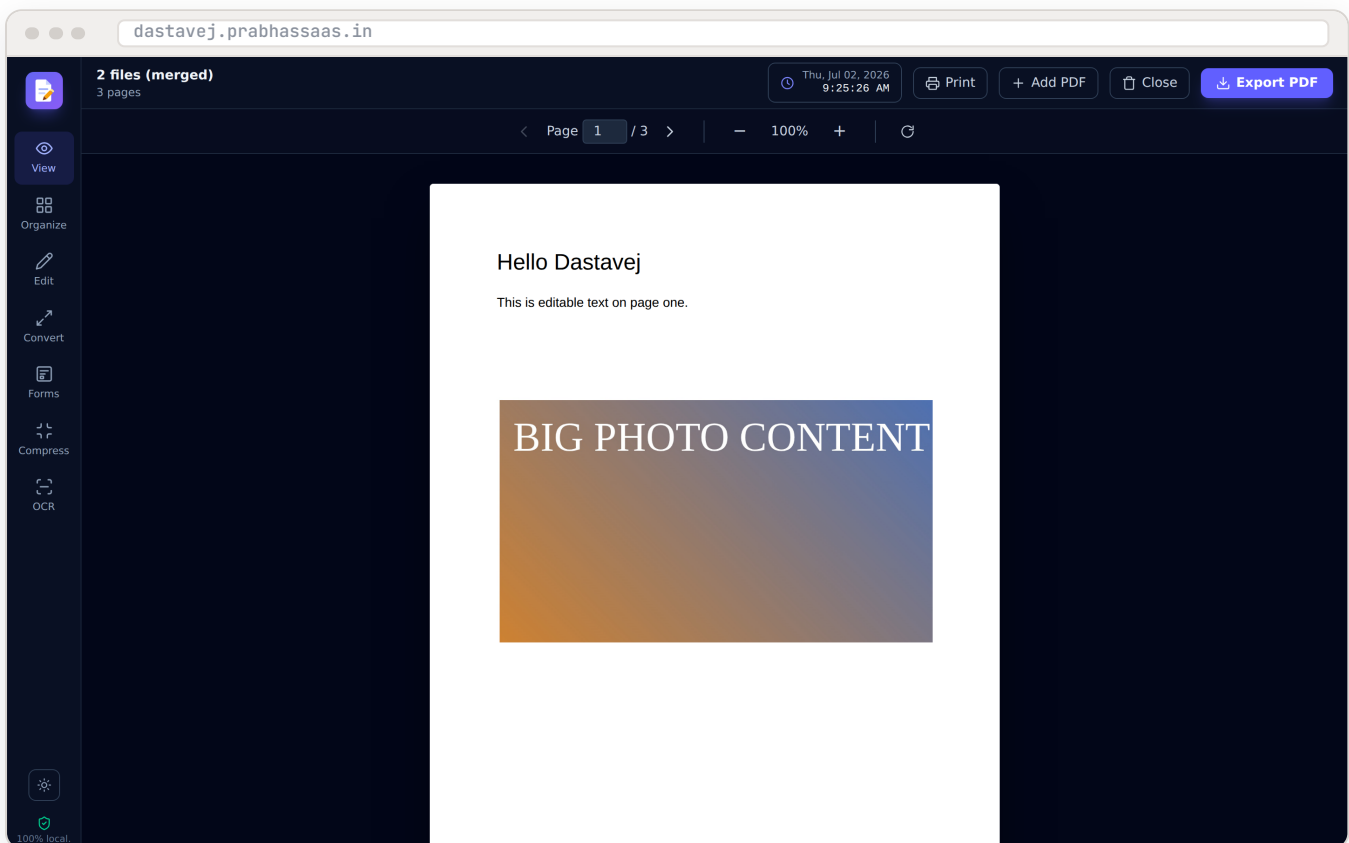

Live · Free

BUILT FOR

Anyone who works with
PDFs, Offices and schools,
Clinics and HR teams

WEB

dastavej.prabhassas.in

Dastavej workspace

THE PROBLEM

Popular PDF tools require uploading sensitive documents to someone else's server and renting the result back as a subscription.

WHAT CHANGES

- ✓ Confidential documents never leave the device
- ✓ No cost, sign-up or watermark
- ✓ Forms collected into Excel without a server
- ✓ A reusable PDF engine for other apps

DASTAVEJ · KEY FEATURES

One tool. Every everyday PDF job.

**Organise, split & merge**

Reorder, rotate, duplicate, extract and interleave pages across files; split by ranges or every N pages.

**Edit text**

Click any text block to rewrite it, with a font recogniser that pre-selects the closest match.

**Annotate & sign**

Highlight, boxes, freehand ink, image stamps and a signature library; 'magic grab' lifts a seal or signature off the page.

**Convert**

PDF to Word, Excel/CSV with real table columns, PowerPoint and images; images to PDF.

**Form wizard**

Fillable AcroForms from 10 templates; filled copies import back and export to Excel.

**Compress**

Embedded images downsampled in a Web Worker, without shipping the file anywhere.

**OCR**

Self-hosted tesseract.js makes scans searchable and exports text or .docx.

**Read aloud**

The browser's speech engine reads the document, with Indic voices grouped when available.

**Watermark & numbering**

Diagonal watermarks, headers, footers and page numbers in bulk.

Also built in

**Restricted PDFs**

Bank statements and HR PDFs with permission restrictions (no open password) work in every tool.

**Selectable text**

An invisible text layer lets you select and copy text like a native viewer.

**Undo / redo**

Full history for edits, annotations and page changes, with Ctrl+Z / Ctrl+Y.

**Image to PDF**

Photos and screenshots into one PDF, with page size, orientation and fit.

Ten ready form templates

Logo, photo box, 10 field types, A5 to A3

AI OFFICE SUITE

Desk

● PLANNED · DESIGN PARTNERS WANTED

[Join the waitlist ↗](#)

The AI-native office suite, made for India.

Desk is the long-term vision: documents, sheets, slides, storage, chat, calendar, meetings and mail, with the Vyasa 1.0 assistant inside every app and voice-first input in Indian languages. It is at the planning and validation stage; everything on these pages describes the intended product, not a shipped one.

CATEGORY	STATUS	BUILT FOR	WEB
AI office suite	Planned · design partners wanted	Founders, Schools, Firms	prabhassaas.in/app/desk

The planned lineup: eleven apps, one intelligent desk

Intended product · not shipped

Pen Documents with track changes on by default and one-line mail-merge	Grid Sheets with natural-language pivots and bank-statement OCR import	Base A no-code relational database with a form designer	Show Slides with themes, a rehearsal coach and deck-to-video
Locker Secure cloud storage for every Prabhas file	Jot Quick notes that sync everywhere	Forms Forms and surveys collected straight into Grid	Adda Team chat next to the work
Diary A festival- and muhurat-aware calendar on the Apr-Mar year	Call Video meetings inside the suite	Mail An inbox with Vyasa 1.0 triage and drafting	Vyasa 1.0 The AI layer across all of it: Ctrl+K Intent Bar, Indic voice, Skill Cards.

What makes it different

AI-native files  Intelligence inside the document, sheet and slide; files carry their own summary and search index.	Voice-first Indic  Designed for Indian languages and voice input from the ground up.
Intent-driven UX  The Vyasa 1.0 Intent Bar (Ctrl+K) turns features into sentences.	Offline-first & portable  CRDT-based open file formats (.pen, .grid, .show) that merge automatically and work without a connection.

DESK · VISION & ROLLOUT

An office suite that reshapes around the task

Vyasa 1.0, the planned assistant

Intent Bar (Ctrl+K)

Describe the task in a sentence; the suite does the steps.

Indic voice input

Say what you want in your language, by voice.

Skill Cards

After doing a task for you, Vyasa quietly teaches the manual method.

Open, portable files

Built on an open file format and a CRDT engine, so work is portable, offline-ready and the user's own.

[.pen](#)[.grid](#)[.show](#)

Kaam Modes

Pick a job and Desk is designed to reshape the toolbar to just the right tools, a ready template and Vyasa 1.0 guidance.

[Invoice](#)[Resume](#)[Tender Reply](#)[School Report](#)[Letter](#)

Phased, framework-first rollout

1

Editors first

Pen, Grid and Show with the Intent Bar

2

Workspace

Locker, Jot, Forms and Adda

3

Time & meetings

Diary and Call

4

Mail

The inbox, tying every app together

One suite, many identities

Each app has its own name, colour and focus, and shares one login, one design language and one assistant across the suite.

Priced the Prabhas way

Intended as a light office suite: one-time-friendly, never a surprise subscription.

HONEST STATUS

Desk is at the planning and validation stage.

Features here describe the intended product, not a shipped one. Founders, schools and firms who join early help decide what is built first, and get first access.

Login v1.0.0

Google or email sign-in

Continue with Google, or email and password with show/hide toggle and a real forgot-password flow.

Single sign-on

A shared .prabhassas.in session hands each app a token; redirects are restricted to Prabhas domains.

Account overview

Customer ID, business identity and verified GSTIN.

Apps & access

Every app, whether it is subscribed, and on which plan.

App connections

Generate a key and connect apps to each other, such as Seedha Bill to Lekhya.

Billing & invoices

Current plan, credits left and invoices.

One account across

Seedha Bill

Lekhya AI

Lekhya Pramaan

Samvaad

Shilp3D Pro

Prabhas account sign-in

THE PROBLEM

Separate apps usually mean separate accounts, passwords and bills.

WHAT CHANGES

- ✓ One password for the whole suite
- ✓ Adopt the next app without a new sign-up
- ✓ Subscriptions and invoices in one place

PRABHAS ACCOUNT · HOW SINGLE SIGN-ON WORKS

Sign in once, arrive signed in everywhere

1

App sends user to /sso

2

Shared session checked

3

Token handed back

4

User lands signed in

Redirects are restricted to *.prabhassaas.in, so a sign-in token can never be sent to another site.

07 TECHNOLOGY ECOSYSTEM

A deliberately lean stack

The lightest technology that does each job, on one shared identity platform. Taken from the products' manifests and source.

Frontend

React · Next.js	Shilp3D (React 18, Vite), Dastavej (Next.js 15, React 19)
Blade · Alpine.js	Lekhya
Vanilla HTML/JS	Seedha Bill, Prabhas Account, website
Tailwind CSS	Lekhya, Shilp3D, Dastavej

Mobile

Flutter	Samvaad, Android first
Drift	Local database and offline outbox
GitHub Actions	Both platforms build on every push

Backend & APIs

Laravel 11 · PHP 8.4	Lekhya ERP
Supabase Edge Functions	Deno/TypeScript: Samvaad, payments, mail, posting
Python · PHP APIs	Shilp3D cloud sync

Database

Supabase Postgres	Shared identity, entitlements, plan catalogue (RLS)
MySQL 8	Lekhya ledgers; Shilp3D drawings
Redis	Lekhya queues and cache

AI / ML

Groq	Default text and vision models (OpenAI-compatible)
Anthropic · Ollama	Selectable drivers in Lekhya
tesseract.js	In-browser OCR in Dastavej

Documents & graphics

pdf.js · pdf-lib	Dastavej rendering and editing
Three.js	Shilp3D 3D preview
DomPDF	Lekhya invoices and reports

Authentication

Supabase Auth	One Prabhas account, SSO across apps
Google OAuth	Continue with Google
Sanctum · TOTP	Lekhya sessions, roles and 2FA

Infrastructure

Hostinger	Website, apps and Lekhya VPS
Docker	Lekhya and Shilp3D containers
PWA	Shilp3D offline, service worker

One shared platform project behind every app

Profiles, per-app entitlements, a single plan catalogue that is the source of truth for price and credits, payment links and a credit ledger. No app hard-codes a price.

07 SECURITY & ENTERPRISE READINESS

Security that is built in, not bolted on

What the code enforces today. No third-party security certification is claimed.

**Tenant isolation**

Every Lekhya query is scoped to the tenant; shared tables use Postgres row-level security with no anonymous grants.

Lekhya · shared backend · Samvaad

**Role-based access**

Roles and permissions per user, with invitations and user management.

Lekhya (Spatie Permission)

**Two-factor authentication**

TOTP two-factor sign-in with a challenge step.

Lekhya

**Audit trail**

An audit trail and audit log of changes; posted journals are immutable.

Lekhya

**Keys never on the device**

AI and payment keys live in server-side secrets, never in an app or browser.

Samvaad · platform

**Backups & local-first**

Database backup service in Lekhya; Dastavej never uploads files at all.

Lekhya · Dastavej

**Privacy-safe logging**

Samvaad never logs invoice content, GSTINs, phone numbers, tokens or OCR text.

Samvaad

**No account enumeration**

Forgot-password confirmations read the same whether or not an account exists.

Suite-wide form standard

**Encrypted certificates**

Client DSC certificates are kept at an encrypted storage path.

Lekhya Pramaan

DEPLOYMENT ARCHITECTURE

One identity. Isolated data. Keys on the server.

All apps share one Supabase identity project. Each app keeps its own data store and enforces tenant isolation.
